

NETWORK CONDITIONS AND TRANSFORMATIONS ON THE GENETIC CODE IN THE LIGHT OF THE CHINESE BOOK OF CHANGES

C	G
A	T

					Condition	NETWORK CONDITIONS AND TRANSFORMATIONS ON THE GENETIC CODE IN THE LIGHT OF THE CHINESE BOOK OF CHANGES
01.0	01	C	C	C	Creativity	Creative energy and inspiration may engender new patterns as a result of unrestrained action by a network
01.1	44	A	C	C	Encounter	Patient caution by the network may be required to avoid premature action
01.2	13	G	C	C	Fellowship	Exertion of a recognized positive influence by the network may be required prior to action
01.3	10	C	A	C	Careful Conduct	Attraction of mass support by the network can lead to the temptations of over-ambition
01.4	09	C	G	C	Subtle Restraint	The network may be faced with the choice between internal development and external social action
01.5	14	C	C	A	Wealth	Widespread recognition of the effects of the action of the network on society may result in long-term positive consequences
01.6	43	C	C	G	Resolution	Catastrophe may result when the network indulges in aspirations exceeding its capacity
						Transformation sequence in order to bear fruit, creativity eventually requires the existence of a receptive environment
02.0	02	T	T	T	Receptivity	A network may respond to the actions and opportunities of its environment through which it may then bring about change
02.1	24	G	T	T	Recovery	The network may take heed of the first signs of deterioration in its environment
02.2	07	A	T	T	Controlled Threat	The network may respond naturally to its environment
02.3	15	T	G	T	Unpretentiousness	Care should be taken to avoid premature public attention to the maturing work of the network
02.4	16	T	A	T	Enthusiasm	The strictest reticence is required by the network to avoid both the enmity of antagonists and the dangers of misplaced acclaim
02.5	08	T	T	G	Solidarity	The network may express its qualities indirectly and discreetly as its actions emerge into prominence
02.6	23	T	T	A	Deterioration	The network may make an inappropriate attempt to take the leading role, thus causing a struggle destructive to all concerned
						Transformation sequence Initiatives emerging in a receptive environment first experience difficulties
03.0	03	G	T	G	Initial Difficulty	Due to the profusion of changes being brought about, confusing obstacles to the growth of network action occur, calling for a cooperative response to bring order out of chaos
03.1	08	T	T	G	Solidarity	The network may proceed cautiously in pursuit of its goal by attracting suitable assistance
03.2	60	C	T	G	Limitation	The network should avoid the obligations entailed by early acceptance of assistance from unexpected sources in times of difficulties
03.3	63	G	G	G	Accomplishment	The network should renounce immediate objectives that have proved unfruitful due to premature action without adequate guidance
03.4	17	G	A	G	Following	Necessary network action may be rendered successful, despite inadequate resources, by obtaining appropriate assistance
03.5	24	G	T	T	Recovery	Its position in society may cause direct action by the network to be distorted, necessitating cautious indirect action to overcome the obstacles arising from such misinterpretations
03.6	42	G	T	C	Assistance	The network may cease its struggle due to an acceptance of the initial difficulties as overwhelming
						Transformation sequence When first launched, initiatives tend to be handicapped by inexperience
04.0	04	A	T	A	Inexperience	Aided by enthusiasm, network action may succeed despite inexperience, provided appropriate guidance is sought with the right attitude
04.1	41	C	T	A	Deficiency	Discipline is a necessary counterweight to dissipative carelessness in network action, although excessive discipline has itself a crippling effect on the development of network potential
04.2	23	T	T	A	Deterioration	Tolerance of shortcomings is a prerequisite for assumption of social responsibility by the network
04.3	18	A	G	A	Remedial Action	The inexperienced network does not develop by applying itself to simple problems which readily offer themselves for solution
04.4	64	A	A	A	Transformation Threshold	The network entangled in action fantasies of imagined significance can often only free itself by experiencing the humiliation which finally results
04.5	59	A	T	C	Barrier Dissolution	The inexperienced network that seeks guidance in an unassuming manner may develop successfully
04.6	07	A	T	T	Controlled Threat	Constraints should be applied to the network that persists in careless action, but only to prevent unjustified excesses

						<i>Transformation sequence After overcoming problems of inexperience, initiatives await further support</i>
05.0	05	C	G	G	Waiting	A network can only derive the strength to confront crises by being able to wait, however long is necessary for opportunities to emerge, rather than being panicked into action by immediate dangers
05.1	48	A	G	G	Basic Need	Before the sensed crisis takes form, the network should continue as long as possible to engage in the long term processes by which its strength is renewed
05.2	63	G	G	G	Accomplishment	As the crisis takes form, disagreements may emerge and escalate dangerously if the network is unable to maintain its tranquillity
05.3	60	C	T	G	Limitation	Premature response to the crisis leaves the network waiting in an exposed and vulnerable position which calls for serious reassessment
05.4	43	C	C	G	Resolution	In the midst of danger any action may aggravate the situation; the composure of the network is the only guarantee of survival as events take their course
05.5	11	C	G	T	Peace	Despite the crisis there are moments of calm which the network should use to fortify itself for renewed struggle
05.6	09	C	G	C	Subtle Restraint	When the crisis strikes, the network must yield to the inevitable whilst being ready to respond to the potential of unforeseen developments
						<i>Transformation sequence Initiatives awaiting support engender conflict over the allocation of available resources</i>
06.0	06	A	A	C	Conflict	When a network encounters opposition in pursuing a course of action it considers appropriate, conflict arises which can only be usefully resolved by coming to terms with the opponent
06.1	10	C	A	C	Careful Conduct	In its incipient stage, especially when the opposition is strong, it may be best for the network to drop an issue rather than risk open conflict
06.2	12	T	A	C	Stagnation	If the opposition is of superior strength, timely withdrawal by the network may prevent undesirable consequences for the community as a whole
06.3	44	A	C	C	Encounter	If the network subordinates itself to a strong ally, conflict can be avoided by not acting to acquire prestige
06.4	59	A	T	C	Barrier Dissolution	If the opposition is of weaker strength, the network will have difficulty in justifying the success of any conflict and can best achieve its ends by redefining its goals
06.5	64	A	A	A	Transformation Threshold	If it is in the right, the network can derive great benefit if the conflict takes place under the auspices of a powerful and just arbiter
06.6	47	A	A	G	Adversity	If the network carries the conflict successfully to the bitter end, it will find its success short lived and constantly exposed to further attack
						<i>Transformation sequence When there is conflict a controlled threat eventually emerges to regulate it</i>
07.0	07	A	T	T	Controlled Threat	For a network to struggle successfully, discipline must be instilled in the community by arousing enthusiasm, sustaining the people and eliciting confidence in the value of its actions
07.1	19	C	T	T	Initiative	For an enterprise to be successful when it is initiated, order must prevail within the network
07.2	02	T	T	T	Receptivity	The network should remain in close touch with the community, sharing its condition and receiving recognition on its behalf, in order to be able to meet the demands made on it
07.3	46	A	G	T	Advancement	If the community takes the initiative from the network, misfortune will ensue
07.4	40	A	A	T	Liberation	If the network is faced with superior opposition, orderly withdrawal avoids the risk of disintegration
07.5	29	A	T	G	Persistence	Energetic struggle by the network is required to counteract any attacks, but a disorderly response may become counterproductive
07.6	04	A	T	A	Inexperience	Following successful action by the network, it is important that power should not be given to those who would abuse it
						<i>Transformation sequence The emergence of a controlled threat eventually promotes solidarity</i>
08.0	08	T	T	G	Solidarity	Complementarity of action by the different parts of a network requires that they should be held together by a central symbol whose significance reinforces each in his understanding of his role within the action of the whole
08.1	03	G	T	G	Initial Difficulty	Only a fundamental sincerity provides the basic cohesive power through which appropriate network relationships can be formed
08.2	29	A	T	G	Persistence	To avoid losing the dignity and intrinsic clarity of its relationships, the network should persevere in the appropriate response to any summons to action
08.3	39	T	G	G	Obstruction	The network should avoid engendering relationships based on false intimacy - formed when differences of habit are underestimated - which subsequently prevents the formation of more genuine and appropriate bonds
08.4	45	T	A	G	Congregation	When the network relationships with the central rallying point are well established, they should be acknowledged openly
08.5	02	T	T	T	Receptivity	The cultivated quality of the central symbol recognized within the network should be such as to engender the voluntary dependence of those who hold to it, leaving others free to go their own way
08.6	20	T	T	C	Recognition	Coherence within a network calls for right timing which if miscalculated through hesitancy may be a cause for regret

						<i>Transformation sequence Solidarity ensures a subtle restraint</i>
09.0	09	C	G	C	<i>Subtle Restraint</i>	When the influence of a network is as yet unable to produce great or lasting effects, it is best that it should act in a restraining or subduing manner in anticipation of ultimate success
09.1	57	A	G	C	<i>Penetrating Clarity</i>	Avoidance of forceful action by the network leaves it free to advance or retreat when obstructions are encountered
09.2	37	G	G	C	<i>Community</i>	The network benefits by retreating with others of similar orientation when obstructions are too great
09.3	61	C	T	C	<i>Essential Quality</i>	Forceful action by the network is bound to fail when circumstances combine to enhance the powers of seemingly minor hindrances
09.4	01	C	C	C	<i>Creativity</i>	Disinterested restraining action by the network to ensure that the right prevails will eventually succeed, despite the real dangers with which such action is threatened
09.5	26	C	G	A	<i>Conservation</i>	Relationships based on loyalty and trust reinforce the effectiveness of the network and of the complementary roles of those involved
09.6	05	C	G	G	<i>Waiting</i>	When the network has achieved limited success from a position of weakness, it is dangerous to pursue the advantage any further until circumstances are more favourable
						<i>Transformation sequence Subtle restraints give rise to careful conduct</i>
10.0	10	C	A	C	<i>Careful Conduct</i>	A network can best relate to those who are strong and intractable by conducting itself with due respect, reinforcing recognition of inner worth whenever it is reflected in external rank
10.1	06	A	A	C	<i>Conflict</i>	The network can make progress when in an inferior position through simple unassuming actions, since it is not yet bound by social obligations
10.2	25	G	A	C	<i>Spontaneity</i>	The network may act successfully in isolation, free of conventional entanglements and the enticements of conventional goals
10.3	01	C	C	C	<i>Creativity</i>	When handicapped, reckless action beyond its capabilities invites disaster, which is only justified when the network is struggling for a higher cause
10.4	61	C	T	C	<i>Essential Quality</i>	The network may succeed in a dangerous enterprise if it acts with caution, conscious of its inner resources
10.5	38	C	A	A	<i>Opposition</i>	For a resolute action to succeed, the network should be aware of the dangers of resoluteness
10.6	58	C	A	G	<i>Vitality</i>	The success of the network can only be assessed in terms of effects of its actions; these then determine the consequences for the network
						<i>Transformation sequence Careful conduct ensures that peaceful relationships prevail</i>
11.0	11	C	G	T	<i>Peace</i>	When harmony prevails in a network and in its relationship with society a period of fruitful action is assured. To benefit from this condition processes must be ordered and adjusted to increase their natural yield
11.1	46	A	G	T	<i>Advancement</i>	Under such favourable circumstances the network attracts together those with similar preoccupations and is encouraged to extend its activities
11.2	36	G	G	T	<i>Decline</i>	The network can overcome the danger of becoming slack in times of harmony by working with the imperfect, risking dangerous undertakings, taking the seemingly insignificant into account, and avoiding factionalism
11.3	19	C	T	T	<i>Initiative</i>	The network can avoid succumbing to the illusion that the period of harmony will never end by recognizing how its inner strengths are independent of external circumstances
11.4	34	C	C	T	<i>Power</i>	In times of mutual confidence, the network can spontaneously establish close contact with the alienated, by emphasizing an inner bond rather than external inequality
11.5	05	C	G	G	<i>Waiting</i>	The network may successfully achieve its ends by uniting with others who have fewer advantages
11.6	26	C	G	A	<i>Conservation</i>	When the period of peace comes to an end the only recourse is to accept the transition and attempt to maintain a measure of harmony within the network itself
						<i>Transformation sequence If peaceful relationships continue to prevail, stagnation eventually results</i>
12.0	12	T	A	C	<i>Stagnation</i>	Disharmony prevailing in a network and in its relationships with society ensures an uncreative period of confusion and disorder. As the exertion of effective influence is impossible, a network can best remain faithful to its principles by withdrawing into seclusion rather than by accepting the temptation of public action
12.1	25	G	A	C	<i>Spontaneity</i>	Under such unfavourable circumstances, the network may best protect its values by retiring into seclusion with other of similar preoccupation
12.2	06	A	A	C	<i>Conflict</i>	The network should not interact with those of inferior values, even though they might welcome such action as a way of reducing their disorder, any consequent suffering to the network is a guarantee of its ultimate success
12.3	33	T	C	C	<i>Withdrawal</i>	Those of inferior values, who have illegitimately acquired power within the network or in society, eventually recognize their lack of ability
12.4	20	T	T	C	<i>Recognition</i>	Those seeking to restore order within the network or in society should feel capable of responding to the challenge in collaboration with others rather than risk acting in the light of their own limited perceptions
12.5	35	T	A	A	<i>Progress</i>	Once the network has emerged into a position from which order can be restored, success is only assured through the greatest attention to the possibilities of failure
12.6	45	T	A	G	<i>Congregation</i>	The network must act deliberately and creatively to end the condition of stagnation and disintegration

						<i>Transformation sequence Stagnation cannot persist indefinitely and therefore fellowship finally emerges</i>
13.0	13	G	C	C	<i>Fellowship</i>	True fellowship can be brought about within and by the network through the emergence of clear, convincing, and inspiring aims. These should be based upon a concern that is universal and be accompanied by the strength to carry them out. To ensure the appropriate functional relationships amongst diverse elements, an organic mode of organization is required
13.1	33	T	C	C	<i>Withdrawal</i>	The network should ensure that the fundamental principles upon which any union is based are equally accessible to all those involved
13.2	01	C	C	C	<i>Creativity</i>	The emergence of exclusive factions based upon self-interest and the rejection of others is a danger to the network and to the achievement of its aims
13.3	25	G	A	C	<i>Spontaneity</i>	Mistrust and reservation within the network undermine fellowship, leading to strategies based on guile which engender further alienation
13.4	37	G	G	C	<i>Community</i>	Confrontation may reach a point at which the opposing parties are no longer able to act against each other, and in this way the situation of the network is usefully clarified
13.5	30	G	C	A	<i>Normative Constraint</i>	Its position in society may cause the network to be able to relate effectively to others who share its fundamental preoccupations only after a long struggle to overcome the obstacles unfortunately separating them
13.6	49	G	C	G	<i>Revolution</i>	The network may be able to engage with others only in a limited alliance based upon mutual interest rather than on a shared approach to universal concerns
						<i>Transformation sequence Through fellowship values emerge, leading to acquisition of wealth</i>
14.0	14	C	C	A	<i>Wealth</i>	A network may acquire a position of power in relation to the strong by acting disinterestedly with a low profile. In this way wealth is appropriately administered in a graceful and controlled manner
14.1	50	A	C	A	<i>Cultural Heritage</i>	The network can avoid the temptation of wealth only by developing an awareness of the many difficulties to be overcome and of the possibilities of mistakes in its use
14.2	30	G	C	A	<i>Normative Constraint</i>	The network should delegate responsibility in order to ensure that the resources at its disposal are used most effectively in new undertakings
14.3	38	C	A	A	<i>Opposition</i>	The network is most successful when it seeks to place itself and the wealth it has acquired at the service of a higher cause, or of society as a whole, rather than vainly attempting to maintain a hold on it for itself
14.4	26	C	G	A	<i>Conservation</i>	The network should carefully distinguish its own position from that of the strong with whom it is in contact, in order to avoid the dangers of vying with them and thus jeopardizing the very basis of its power
14.5	01	C	C	C	<i>Creativity</i>	Even when the benevolent action of the network succeeds in attracting support based solely on unaffected sincerity, the tendency for insolence to emerge must be kept in check through the strength of dignity
14.6	34	C	C	T	<i>Power</i>	When at the height of its power, the network can best enhance the value of its position by cultivating an unassuming attitude and honouring values which transcend the mundane affairs of society
						<i>Transformation sequence To retain valuable possessions, the amount should be modest and the attitude unpretentious</i>
15.0	15	T	G	T	<i>Unpretentiousness</i>	A network prospers best by acting in an unassuming manner, whether in a position of influence or not. This principle also favours its efforts to establish order by reducing those extremes and inequalities which are the source of discontent
15.1	36	G	G	T	<i>Decline</i>	The network may successfully undertake dangerous enterprises if the situation is not confused by unnecessary claims and by the resistance of others resulting from such claims
15.2	46	A	G	T	<i>Advancement</i>	When an unassuming manner is natural to the network's mode of action, the possibilities of exerting a lasting influence emerge of their own accord
15.3	02	T	T	T	<i>Receptivity</i>	If the network responds immodestly to widespread recognition of its achievements, criticism develops, preventing the work from being carried through to its final fruition
15.4	62	T	C	T	<i>Conscientiousness</i>	The network should guard against the danger that an unassuming manner of action may become an effective disguise for irresponsibility and inaction
15.5	39	T	G	G	<i>Obstruction</i>	Circumstances may call for energetic corrective action by the network, which should not interpret the merit of an unassuming mode as an excuse for letting events take an inappropriate course
15.6	52	T	G	A	<i>Inaction</i>	The network should act vigorously to defend itself and order its environment, especially when the root of the problem lies in weaknesses of own
						<i>Transformation sequence Valued possessions and unpretentiousness together engender enthusiasm</i>
16.0	16	T	A	T	<i>Enthusiasm</i>	A network can arouse enthusiasm by acting in harmony with the needs of the time and co-opting assistance for the completion of an undertaking. Such enthusiasm releases people from the grip of mundane tensions and allows them to express the hidden potentials of their society
16.1	51	G	A	T	<i>Crisis Preparedness</i>	When in a position of weakness, the network invites misfortune if it makes enthusiastic claims about its own connection with those in positions of power
16.2	40	A	A	T	<i>Liberation</i>	The network should not allow itself to be misled by illusory manifestations of enthusiasm, but should be sensitive to the emerging tendencies of the time, acting self-reliantly in response to those in positions of strength or weakness
16.3	62	T	C	T	<i>Conscientiousness</i>	The network must choose the right moment to act, for otherwise either the opportunity will be lost or else it will become unnecessarily dependent on an external leader capable of engendering enthusiasm
16.4	02	T	T	T	<i>Receptivity</i>	The network can arouse enthusiasm and cooperation through its own self-confidence and the sincere support it gives to those who collaborate with it
16.5	45	T	A	G	<i>Congregation</i>	The network can be obstructed in its ability to engender enthusiasm, but this may usefully prolong its existence by preventing it from depleting its energies
16.6	35	T	A	A	<i>Progress</i>	Being misled by false enthusiasm may constitute a valuable learning experience for the network, provided it is subsequently capable of further development

					<i>Transformation sequence Where enthusiasm persists, a following emerges</i>
17.0	17	G	A	G	<i>Following</i> In order to be capable of inducing people voluntarily to follow its lead without resistance, the network must first adapt itself to their circumstances to be able to serve them
17.1	45	T	A	G	<i>Congregation</i> In order for the network to identify how it should adapt to its environment, it must open itself to contact with a wide range of different views
17.2	58	C	A	G	<i>Vitality</i> In developing its pattern of contacts, the network should take care to avoid those holding inferior values or risk losing those holding superior values by which its action can be benefitted
17.3	49	G	C	G	<i>Revolution</i> The development of its contacts with those holding superior values will lead the network to obtain what it needs for its own development, despite the loss of stimulating distractions with those holding inferior values
17.4	03	G	T	G	<i>Initial Difficulty</i> Once it is successful in its influence, the network should develop the ability to distinguish insincere supporters, attracted for their own advantage, who must be kept at a distance if success is not to be jeopardized
17.5	51	G	A	T	<i>Crisis Preparedness</i> The network must itself follow something which guides, legitimates and empowers its initiatives
17.6	25	G	A	C	<i>Spontaneity</i> Having developed its activities to the point of detachment from mundane affairs, the network may be confronted with a persistent following which once more draws it back into a guiding role
					<i>Transformation sequence Following others leads to undertakings and remedial action</i>
18.0	18	A	G	A	<i>Remedial Action</i> Inertia, indifference and the abuse of human freedom lead to deterioration of the network or society and call for decisive, energetic action, if regeneration is to occur
18.1	26	C	G	A	<i>Conservation</i> Deterioration due simply to rigid adherence to conventional patterns of action may easily be remedied, provided that the network is conscious of the dangers associated with any such reform
18.2	52	T	G	A	<i>Inaction</i> The deterioration may be the result of inherent weakness, in which case the network should avoid drastic action so as not to further aggravate the situation
18.3	04	A	T	A	<i>Inexperience</i> If the network proceeds somewhat too energetically in rectifying the mistakes of the past, difficulties will arise, but this is preferable to the results of insufficiently vigorous action
18.4	50	A	C	A	<i>Cultural Heritage</i> Misfortune will result if the network is itself too weak to take action against progressive deterioration resulting from past mistakes
18.5	57	A	G	C	<i>Penetrating Clarity</i> Even though it is inadequate to the challenge of past neglect and corruption, the network may achieve partial success with the assistance of others
18.6	46	A	G	T	<i>Advancement</i> The development of the network may be such that it is unnecessary for it to engage in any remedial action, provided that, in its withdrawal from mundane affairs, it engenders new values for the future
					<i>Transformation sequence Where there is scope for remedial action, there is growth through initiative</i>
19.0	19	C	T	T	<i>Initiative</i> When conditions are appropriate for a network to initiate action on mundane affairs, this should be done with determination and perseverance, bearing in mind the need to prepare for unfavourable conditions which in their turn will later prevail
19.1	07	A	T	T	<i>Controlled Threat</i> When superior values find a response in influential circles, the network could well associate itself with this trend, provided this does not distract it from its own line of action
19.2	24	G	T	T	<i>Recovery</i> When the initiative originates in the light of superior values, the network should not hesitate to apply its own resources to the task, for such action must necessarily contribute to ultimate success
19.3	11	C	G	T	<i>Peace</i> When the network is succeeding in its initiative, there is a danger that lack of vigilance may lead to careless mistakes, which may however be remedied by responsible action
19.4	54	C	A	T	<i>Elective Affinity</i> The action is benefitted when the network is open-minded in its approach to those of ability who are attracted by its initiative
19.5	60	C	T	G	<i>Limitation</i> The network should act with self-restraint in order to attract those of quality capable of undertaking all that is required by the initiative without interference
19.6	41	C	T	A	<i>Deficiency</i> A network which has withdrawn from mundane affairs may under certain circumstances initiate new action for the benefit of those it attracts
					<i>Transformation sequence The results of initiative call for recognition</i>
20.0	20	T	T	C	<i>Recognition</i> Through the effort it devotes to comprehending the significance underlying external events, a network acquires the power to apply that understanding to influence events. This power can be recognized by others, who may in turn be influenced by it to take the actions of the network as a model for their own
20.1	42	G	T	C	<i>Assistance</i> Whilst it is to be expected that some can only be superficially affected by a profound understanding of events, it is to be regretted when the network of superior values contents itself with a shallow, disconnected view of the forces prevailing in society as a whole
20.2	59	A	T	C	<i>Barrier Dissolution</i> Whilst for some it is sufficient to view the world from a subjectively limited standpoint, this narrowness is harmful in the case of the network which must take an active part in the affairs of the world
20.3	53	T	G	C	<i>Development</i> When it focuses on recognition of its own nature and the effects it creates, this may be a basis for the network to determine whether or not it is developing
20.4	12	T	A	C	<i>Stagnation</i> The network should facilitate independent action by those who understand how it can be made to flourish
20.5	23	T	T	A	<i>Deterioration</i> Self-evaluation by the network of superior values will only bring satisfaction when its effects are beneficial and free of mistakes
20.6	08	T	T	G	<i>Solidarity</i> The network detached from mundane affairs will most benefit society when exploration of psycho-social processes brings recognition of how it may avoid being responsible for generating negative effects

						<i>Transformation sequence Recognition of the relationship between results engenders decisive integrative action</i>
21.0	21	G	A	A	<i>Decisive Action</i>	When faced with deliberate hindrance to integrative development, a network must take a just measure of decisive action against those responsible. Such hindrances increase when norms are unclear and there is negligence in ensuring that they are respected
21.1	35	T	A	A	<i>Progress</i>	If the network responds mildly to any initial departure from norms this should constitute sufficient warning against repetition of the infringement
21.2	38	C	A	A	<i>Opposition</i>	If the response of the network to frequent infringement of norms is excessive, this should not be regretted since the results are merited
21.3	30	G	C	A	<i>Normative Constraint</i>	Although no other course is possible, if the network lacks the power and authority to back up its censure when norms have been infringed, strong negative feelings will be engendered against it, placing it in a somewhat humiliating position
21.4	27	G	T	A	<i>Support</i>	If those infringing norms are powerful, the network can only succeed in censuring them by acting with great clarity and force
21.5	25	G	A	C	<i>Spontaneity</i>	In order to respond impartially, the network should be constantly aware of the dangers associated with the responsibility it has assumed in censuring infringement of norms
21.6	51	G	A	T	<i>Crisis Preparedness</i>	If those infringing norms fail to respond to censorship by the network, misfortune inevitably results
						<i>Transformation sequence Rather than acting crudely, decisive integrative action calls for a graceful style</i>
22.0	22	G	G	A	<i>Style</i>	A network may succeed in matters of lesser importance by gracefully respecting the sensitivities of those concerned. Fundamental or controversial issues cannot however be resolved by cultivating an appropriate image in this way
22.1	52	T	G	A	<i>Inaction</i>	When the network is in a subordinate role, the gracefulness of self-reliance leads to greater success than the surreptitious acceptance of assistance
22.2	26	C	G	A	<i>Conservation</i>	The network risks deluding itself if it attaches greater importance to the form of its actions than to their substance
22.3	27	G	T	A	<i>Support</i>	The gracious style of the network may prove so enchanting to all concerned that the vigilance necessary for the success of its action is lost
22.4	30	G	C	A	<i>Normative Constraint</i>	The network may find that more significant relationships are possible by acting simply than by depending on the trappings associated with a gracious mode of response
22.5	37	G	G	C	<i>Community</i>	Once the network has chosen to abandon dependence on a gracious mode of action, it will at first be embarrassed when attempting to relate to those of superior values who only attach significance to the substantive contributions it has to make
22.6	36	G	G	T	<i>Decline</i>	In the final stage of the network's development, the form of its action no longer disguises the substance but rather expresses its value to the full
						<i>Transformation sequence Excessive emphasis on style leads to deterioration</i>
23.0	23	T	T	A	<i>Deterioration</i>	Under certain conditions of society inferior values may predominate. A network of superior values is wise to accept this phase of events calmly rather than vainly attempting to counteract it
23.1	27	G	T	A	<i>Support</i>	Those of inferior values may initiate schemes to undermine the position of the network by intriguing against its supporters
23.2	04	A	T	A	<i>Inexperience</i>	The network, isolated by the initiatives of those of inferior values, may be destroyed unless it can rapidly adjust its position
23.3	52	T	G	A	<i>Inaction</i>	Provided it is able to enhance the expression of its superior values, the network may disassociate itself from those of inferior values, who will then oppose it actively
23.4	35	T	A	A	<i>Progress</i>	Events can deteriorate to the point at which the network is unable to avoid misfortune
23.5	20	T	T	C	<i>Recognition</i>	Those of inferior values may be attracted by the superior values of the network and voluntarily accept its guidance
23.6	02	T	T	T	<i>Receptivity</i>	As support for the network increases, the strategies of those of inferior values become progressively more self-destructive
						<i>Transformation sequence Deterioration cannot continue indefinitely, thus recovery finally commences</i>
24.0	24	G	T	T	<i>Recovery</i>	A network may recover spontaneously from adverse conditions, with the old patterns being transformed naturally into the new. This process of renewal should not be disturbed by acting prematurely
24.1	02	T	T	T	<i>Receptivity</i>	Occasionally the network will not be able to avoid adopting inferior values, at least to some degree; such errors should not be regretted if they are rectified promptly
24.2	19	C	T	T	<i>Initiative</i>	Renewal calls for a positive decision by the network to confirm the stability of the new order; this is best done in a supportive environment
24.3	36	G	G	T	<i>Decline</i>	Renewal is not impossible, even if the network is so unstable as to be repeatedly attracted to inferior values, only to renounce them after each such deviation
24.4	51	G	A	T	<i>Crisis Preparedness</i>	Although in an environment dominated by inferior values, the network may renew itself in isolation by responding to superior values
24.5	03	G	T	G	<i>Initial Difficulty</i>	If the time is appropriate for renewal, the network should publicly recognize any errors in its old pattern of actions, rather than reinforcing them with trivial arguments
24.6	27	G	T	A	<i>Support</i>	If the network does not take advantage of an appropriate occasion for renewal, it is condemned, by its own attitude, to an extended period of unfortunate conflictual relationships with its environment

						<i>Transformation sequence Recovery lifts the weight of the past leading to innocent spontaneity</i>
25.0	25	G	A	C	<i>Spontaneity</i>	A network is most successful when it acts spontaneously in response to emerging events rather than on the basis of some pre-defined programme. However, the guidance of such instinctive certainty leads to misfortune unless it is correctly rooted in superior values
25.1	12	T	A	C	<i>Stagnation</i>	The network can be confident of success when it acts on impulses involving no expectation of gain
25.2	10	C	A	C	<i>Careful Conduct</i>	The network's activity can succeed if each phase is carried out for its own sake and irrespective of any possible result
25.3	13	G	C	C	<i>Fellowship</i>	Even though the network acts without expectation of gain, it should be prepared to adjust to the possibility of misfortunes arising from external events
25.4	42	G	T	C	<i>Assistance</i>	No catastrophe can deprive the network of its inherent qualities, provided it continues to uphold them
25.5	21	G	A	A	<i>Decisive Action</i>	In the event of catastrophe arising from external causes, the network should take time to heal itself rather than call on external assistance
25.6	17	G	A	G	<i>Following</i>	When the time is not appropriate, any spontaneous response by the network is likely to be counterproductive
						<i>Transformation sequence The excesses of spontaneity are contained through conservation measures</i>
26.0	26	C	G	A	<i>Conservation</i>	A network may be called upon to bind together, restrain, and care for valued features of society. Such an intimate relationship with the products of past initiatives is in itself valuable to a network's development
26.1	18	A	G	A	<i>Remedial Action</i>	Vigorous action by the network may be so obstructed that, to avoid misfortune, further efforts are best restrained
26.2	22	G	G	A	<i>Style</i>	The forces restraining network action may be so superior that energy is best conserved in anticipation of a later opportunity
26.3	41	C	T	A	<i>Deficiency</i>	When there is an opportunity for action, the network should move forward with others sharing its intent, meanwhile preparing its defences against unforeseen problems
26.4	14	C	C	A	<i>Wealth</i>	Prompt action by the network is necessary to forestall initiatives which are not self-restraining
26.5	09	C	G	C	<i>Subtle Restraint</i>	The network may best counteract unruly action by changing its nature or diverting it into appropriate channels
26.6	11	C	G	T	<i>Peace</i>	The network may achieve a position in which its influence prevails because its action is no longer inhibited by opposing forces
						<i>Transformation sequence Conservation measures ensure that support is provided where necessary</i>
27.0	27	G	T	A	<i>Support</i>	A network should be attentive to the manner in which it supports both its own activities and those of others able to contribute to the development of society
27.1	23	T	T	A	<i>Deterioration</i>	Misfortune results when the network's self-reliance is undermined in aspiring to the apparent advantages of others
27.2	41	C	T	A	<i>Deficiency</i>	Misfortune results when the network fails to become self-reliant and persists in depending on others
27.3	22	G	G	A	<i>Style</i>	The network cannot be successful if it seeks advantages for their own sake and thus becomes dependent upon them
27.4	21	G	A	A	<i>Decisive Action</i>	When the network is in a position of influence, it should seek out others of the right quality to assist in achieving advances for society as a whole
27.5	42	G	T	C	<i>Assistance</i>	If deficiencies in its mode of action prevent it from contributing effectively to the development of society, the network should seek the advice of those of superior values
27.6	24	G	T	T	<i>Recovery</i>	When the network becomes a source of influence in sustaining society, it can best continue in this role by being aware of the dangers of such responsibility
						<i>Transformation sequence Continual build-up of support leads to importance</i>
28.0	28	A	C	G	<i>Importance</i>	Circumstances may be such that a network of superior values experiences a period of great potential influence. This condition is necessarily unstable and the possible transition to other conditions should be carefully explored, whatever sacrifices these may then demand
28.1	43	C	C	G	<i>Resolution</i>	In undertaking any new initiative under favourable conditions, the network should take extreme care in its preparations
28.2	31	T	C	G	<i>Influence</i>	Under favourable conditions, the establishing of a relationship with those of inferior values may offer the possibility of renewal to the network
28.3	47	A	A	G	<i>Adversity</i>	If the network is reckless in its initiatives and ignores advice, favourable conditions are destabilized and catastrophe may result
28.4	48	A	G	G	<i>Basic Need</i>	The situation may be stabilized with the assistance of those of inferior values, but the result will be unfortunate if the network achieves this out of self-interest
28.5	32	A	C	T	<i>Endurance</i>	If the network abandons its contacts with those of inferior values, the cultivation of its contacts with those of superior values will further destabilize the situation rather than leading to its renewal
28.6	44	A	C	C	<i>Encounter</i>	Under exceptional conditions the task faced can be so dangerous that the network may have to accept that it may accomplish its aim only by sacrificing its very existence for the values in question

					<i>Transformation sequence Excessive importance is undermined by persistence</i>
29.0	29	A	T	G	<i>Persistence</i> A network may succeed through persisting in its course of action, responding appropriately to difficulties as they emerge. In this way the difficulties may subsequently be used as a form of protection
29.1	60	C	T	G	<i>Limitation</i> The network should avoid adapting permanently to dangers for this may prevent it from functioning appropriately in a normal environment
29.2	08	T	T	G	<i>Solidarity</i> When faced with danger, the network should assess the situation and act with caution
29.3	48	A	G	G	<i>Basic Need</i> In certain dangerous circumstances, inaction is preferable to action which may aggravate the situation for the network
29.4	47	A	A	G	<i>Adversity</i> In times of danger, the network can usefully base its relationships on simplicity of substance rather than on complex forms of protocol
29.5	07	A	T	T	<i>Controlled Threat</i> Danger will be increased if the network has ambitions beyond its capacities and the opportunities of the moment
29.6	59	A	T	C	<i>Barrier Dissolution</i> If the network becomes confused in its strategy in a highly dangerous situation, it is unlikely that this can be immediately remedied
					<i>Transformation sequence Persistence is only effective if there are normative constraints</i>
30.0	30	G	C	A	<i>Normative Constraint</i> By its nature a network is conditioned and unable to act freely. It may best achieve success by recognizing the beneficial limitations on which it can usefully depend. Through such voluntary compliance, a network develops the clarity of perception required for effective action
30.1	56	T	C	A	<i>Marginality</i> The network should maintain its composure in the midst of the confusion of society, so it may concentrate attention on the initial phases of any new action
30.2	14	C	C	A	<i>Wealth</i> The network acts with greatest skill when striking a fruitful balance between extreme strategies
30.3	21	G	A	A	<i>Decisive Action</i> Recognition of the network's transitory nature should induce comprehension of how it is fulfilled by playing its role in historical processes, rather than encouraging despair or efforts to avoid despair
30.4	22	G	G	A	<i>Style</i> If the network is overactive it may rapidly deplete its internal resources, without achieving any lasting effect
30.5	13	G	C	C	<i>Fellowship</i> At the peak of its activity the network may derive long-term benefit by recognizing the transitory nature of its preoccupations
30.6	55	G	C	T	<i>Prosperity</i> In inducing discipline within itself or society, the network should eradicate the promoters of inferior values, whilst tolerating the weakness of those persuaded to follow them
					<i>Transformation sequence Normative constraints operate through mutual influence</i>
31.0	31	T	C	G	<i>Influence</i> Success results from mutual attraction. This may be induced by a network of superior values whose openness to counsel is a fruitful influence on such relationships
31.1	49	G	C	G	<i>Revolution</i> Until the intention of the network has a visible effect it has no positive or negative influence on society
31.2	28	A	C	G	<i>Importance</i> The network runs the risk of misfortune if it acts before being impelled to do so by a genuine influence
31.3	45	T	A	G	<i>Congregation</i> To avoid humiliation, the network should cultivate restraint in selecting the influences to which it responds and should exercise control on the response itself
31.4	39	T	G	G	<i>Obstruction</i> The influence of the network is most successful and widespread when it results from an appreciation of its intentions rather than from a deliberate effort to manipulate some target group
31.5	62	T	C	T	<i>Conscientiousness</i> If the network's influence is primarily focused on its own actions, such closure to outside influence in turn limits its influence upon society
31.6	33	T	C	C	<i>Withdrawal</i> Any attempt by the network to influence society through words alone is necessarily insignificant and without consequence
					<i>Transformation sequence Influence can only be effective if it endures</i>
32.0	32	A	C	T	<i>Endurance</i> A network may be characterized by a self-renewing movement acting alternately on itself and on society. For a network of superior values this ensures a flexibility in response to the environment which is grounded on an inner directive that governs all its actions
32.1	34	C	C	T	<i>Power</i> The network can only ensure enduring effects through careful action over a long period that precludes any form of precipitate action
32.2	62	T	C	T	<i>Conscientiousness</i> If the strength of the network is greater than its material resources, successful control may avoid an inappropriate response
32.3	40	A	A	T	<i>Liberation</i> Inconsistency on the part of the network, in response to external events, leads to unexpected forms of humiliation
32.4	46	A	G	T	<i>Advancement</i> For the network to achieve success through persistence , it is necessary that the action should be appropriate
32.5	28	A	C	G	<i>Importance</i> If the network undertakes an active role, it should remain flexible in adapting to circumstances in the light of its enduring values; whereas in a passive role, it should be consistent in conforming to external guidelines
32.6	50	A	C	A	<i>Cultural Heritage</i> If the network is permanently agitated, any attempt to produce enduring effects is undermined

					<i>Transformation sequence Endurance cannot continue indefinitely, therefore withdrawal takes place</i>
33.0	33	T	C	C	Withdrawal A network may usefully withdraw when faced with opposing forces favoured by the current circumstances of society. For the retreat to be constructive it should be carried out with acts of resistance which prepare the way for later counter-movement
33.1	13	G	C	C	Fellowship The retreating network should not take any initiative if it is in immediate contact with the opposing forces
33.2	44	A	C	C	Encounter Those of inferior values may maintain such close contact with the network that they are successful in achieving superior goals
33.3	12	T	A	C	Stagnation The network may only achieve the freedom to retreat by taking responsibility for those who would otherwise prevent it, but this course carries its own risks
33.4	53	T	G	C	Development The network of superior values adapts easily and harmoniously to the process of retreat from those of inferior values who degenerate when deprived of such guidance
33.5	56	T	C	A	Marginality The network must judge the time for retreat correctly, and act firmly, or else run the risk of unpleasant discussion of irrelevant matters
33.6	31	T	C	G	Influence Once the network has ceased to identify with the prevailing conditions it acquires the ability to act fully in following the most appropriate line of retreat
					<i>Transformation sequence Withdrawal cannot continue indefinitely, hence power becomes evident</i>
34.0	34	C	C	T	Power A network of superior values may acquire great strength and run the risk of depending upon that strength alone. True power is only exhibited when that strength is used in the service of a higher cause
34.1	32	A	C	T	Endurance If the network attempts to use its strength from an inferior position it courts disaster
34.2	55	G	C	T	Prosperity As resistance breaks down, the network may easily become self-confident and lose the advantage of balanced use of its force
34.3	54	C	A	T	Elective Affinity The network should avoid displays of power for their own sake, especially because of the complications to which they lead
34.4	11	C	G	T	Peace When all resistance disappears, the network is free to use all its powers, although the less this is apparent the greater its effectiveness
34.5	43	C	C	G	Resolution When all resistance has disappeared, it is no longer desirable for the network to act forcefully and decisively
34.6	14	C	C	A	Wealth The network should discontinue its initiative if, having proceeded too far in its actions, it encounters complications which hinder any further action
					<i>Transformation sequence Power cannot be restrained indefinitely, hence progressive expansion occurs</i>
35.0	35	T	A	A	Progress A network may achieve great progress when it is able to influence others to collaborate in the light of superior values. Progress may be accompanied by expansion
35.1	21	G	A	A	Decisive Action The network's initiative may fail to meet with a positive response from those calling for progress and it should not run the risk of making mistakes through being perturbed by this
35.2	64	A	A	A	Transformation Threshold The network should continue in its efforts, even though progress is blocked and inspiration lost, for the latter will return when it can be based on fundamental principles not centred on the narrow preoccupations of the network
35.3	56	T	C	A	Marginality The network may be encouraged by the support of others, even though it is unable to succeed without their assistance
35.4	23	T	T	A	Deterioration The network should avoid the temptation of using its position to accumulate advantages, especially since such abuse tends to be discovered in times of progress
35.5	12	T	A	C	Stagnation The network should appreciate the values of its influential position in promoting the progress of society, rather than regretting lost opportunities in which its own narrower interests could have been advanced
35.6	16	T	A	T	Enthusiasm The network may act aggressively to rectify conditions opposing progress among its own contacts but should be aware of the dangers of such a procedure, particularly when extended to others
					<i>Transformation sequence Progressive expansion eventually encounters resistance leading to decline</i>
36.0	36	G	G	T	Decline In adverse circumstances a network should not reveal the values it holds and thus provoke opposition. Rather it should appear to accept the prevailing standards and mode of behaviour whenever this is necessary
36.1	15	T	G	T	Unpretentiousness Faced with opposition, the network may limit its objectives but will nevertheless face continuing opposition if it remains true to its principles
36.2	11	C	G	T	Peace Although handicapped by opposing forces, the network may concentrate beneficially on assisting others who are also at risk
36.3	24	G	T	T	Recovery In the process of establishing a new order, the network may contain the initiator of the opposition, but premature consolidation of such a victory should be carried out with caution if the habits of the old order have become too well-entrenched
36.4	55	G	C	T	Prosperity The network may be able to avoid being drawn into disaster by being well informed concerning the intentions of the initiator of the opposition
36.5	63	G	G	G	Accomplishment If the network is obliged to remain under the influence of the opposing forces, it can only survive intact through the exercise of dissimulation and considerable caution
36.6	22	G	G	A	Style The forces in opposition to the network of superior values turn upon themselves at the height of their power and cause their own destruction

						<i>Transformation sequence Decline eventually necessitates a withdrawal into a community context</i>
37.0	37	G	G	C	Community	A network can only influence others effectively when its external initiatives are consistent with its own internal mode of organization. A community context is most favourable to this
37.1	53	T	G	C	Development	Within the network a measure of discipline is necessary in order that each member learns to fulfil his or her own function to enable the network to undertake external initiatives successfully
37.2	09	C	G	C	Subtle Restraint	The network should concentrate on 'keeping its own house in order' rather than undertaking initiatives based on force
37.3	42	G	T	C	Assistance	In disciplining itself the network should seek a careful mean between the excesses of indulgence and severity, although under exceptional conditions the latter may be necessary
37.4	13	G	C	C	Fellowship	In manifesting its principles in a role of stewardship, the network contributes significantly to the well-being of society
37.5	22	G	G	A	Style	The character of the principles governing the network may be such that no disciplinary action is required to achieve the necessary effects
37.6	63	G	G	G	Accomplishment	The quality of the achievements engendered by the principles of the network is the fundamental force holding it together
						<i>Transformation sequence When the community context proves inadequate, misunderstandings and opposition arise</i>
38.0	38	C	A	A	Opposition	The preservation of the individuality of a network of superior values can only be achieved through creative opposition to those of inferior values. It on this basis that order is engendered. Faced with opposition and misunderstandings a network should concentrate on minor initiatives
38.1	64	A	A	A	Transformation Threshold	The network should avoid the consequences of attempting to ensure unity through forceful action since the temporarily estranged will re-establish contact of their own accord and those who impose themselves will eventually drift away
38.2	21	G	A	A	Decisive Action	Informal contacts may suffice when misunderstandings prevent the network from establishing formal relationships with its natural partners
38.3	14	C	C	A	Wealth	Despite opposition and discouragement, the network can succeed if it discovers a trustworthy partner of complementary nature
38.4	41	C	T	A	Deficiency	Although isolated in opposition to others, the network will eventually succeed through maintaining contact with a natural partner
38.5	10	C	A	C	Careful Conduct	The opposition faced by the network may initially prevent recognition of a trustworthy partner with whom it is beneficial for it to work
38.6	54	C	A	T	Elective Affinity	The isolation experienced by the network may be due to opposition based upon misunderstanding which once clarified permits fruitful collaboration
						<i>Transformation sequence Through misunderstandings and opposition, difficulties and obstructions are created</i>
39.0	39	T	G	G	Obstruction	When faced with difficulties and obstacles to the achievement of its intentions, a network of superior values searches for errors in the assumptions underlying its initiative, thus creating the opportunity for its own further development
39.1	63	G	G	G	Accomplishment	The network, when faced with obstacles, should retreat temporarily in anticipation of a more appropriate occasion for action
39.2	48	A	G	G	Basic Need	When its obligations so dictate, the network should attack the obstacle directly rather than seeking ways to circumvent it
39.3	08	T	T	G	Solidarity	If the network has others dependent upon it, whose existence would be endangered by its failure, it is preferable for it to avoid tackling the obstacle
39.4	31	T	C	G	Influence	It is preferable for the network to avoid hasty action against an obstacle in order to gather support and make adequate preparations
39.5	15	T	G	T	Unpretentiousness	Despite the importance of the obstruction, if the network is totally committed to the task it will attract collaborators with whom success may be achieved
39.6	53	T	G	C	Development	If a network no longer concerned with mundane affairs is faced with obstructions, it can through its experience and insight bring about a solution of special significance, rather than vainly attempting to avoid the issue
						<i>Transformation sequence Obstructions cannot persist indefinitely, thus eventually liberation is achieved</i>
40.0	40	A	A	T	Liberation	When a network is liberated from the obstacles which have hindered its initiatives, any remaining problems should be cleared up rapidly without dwelling unduly on the misdeeds of those responsible for the obstacles
40.1	54	C	A	T	Elective Affinity	After liberation has been achieved, the network should recuperate in peace and refrain from immediate action
40.2	16	T	A	T	Enthusiasm	Full commitment by the network to just action undermines the efforts of those who seek to prevent liberation by influencing those in power
40.3	32	A	C	T	Endurance	After liberation, the network should take care not to flaunt its successes and thus attract those capable of appropriating them
40.4	07	A	T	T	Controlled Threat	In anticipation of liberation, the network should disassociate itself from casual collaborators who are liable to discourage offers of support from more deeply committed potential partners
40.5	47	A	A	G	Adversity	To achieve liberation successfully, the network of superior values must avoid affirming any contribution from those of inferior values, thus encouraging them to withdraw
40.6	64	A	A	A	Transformation Threshold	The network will achieve liberation successfully it acts forcefully to remove those of inferior values who have reached key positions of power

						<i>Transformation sequence The process of liberation necessarily results in some loss and deficiency</i>
41.0	41	C	T	A	Deficiency	A network may experience a decrease in the external resources available. This situation may be used to clarify and strengthen the inner resources on which it can draw for future undertakings
41.1	04	A	T	A	Inexperience	In accepting assistance, the network of superior values should take care not to overstrain the abilities of those offering it, nor should it exploit them
41.2	27	G	T	A	Support	In order for the network to be able to provide assistance of enduring significance to others, it must take care not to overstrain its own resources
41.3	26	C	G	A	Conservation	Collaborating with two partners in an undertaking leads to an unstable situation for the network resulting in the alienation of one of them, whereas a partner will be found if the network undertakes an initiative alone
41.4	38	C	A	A	Opposition	If the network is able to reduce its defects this encourages those who are well-disposed to collaborate
41.5	61	C	T	C	Essential Quality	If those in power appoint the network to perform a key role there is nothing to prevent its success
41.6	19	C	T	T	Initiative	Every increase in the power of the network may be such as to benefit others, rather than to deprive others of benefits
						<i>Transformation sequence If deficiency persists it eventually evokes assistance</i>
42.0	42	G	T	C	Assistance	By sacrificing its own interests in favour of the development of others, a network may temporarily create conditions in which great progress can be made. The development of the network itself may be brought about by adopting the positive attributes of others and eliminating its own defects
42.1	20	T	T	C	Recognition	The network should use any major assistance it receives from those in power for initiatives which it would not otherwise be able to undertake
42.2	61	C	T	C	Essential Quality	The network brings about its own development by producing in itself the necessary conditions and identifying with the progressive spirit of the times
42.3	37	G	G	C	Community	In times of great progress even unfortunate events may be advantageous, releasing the network from error and enabling it to act with authority according to the needs of the moment
42.4	25	G	A	C	Spontaneity	The network may usefully function, especially with respect to major undertakings, as an intermediary between those in power and those who should benefit from such progress
42.5	27	G	T	A	Support	The beneficial influence of the network's assistance results from its expression of an inner necessity for which recognition is sufficient reward
42.6	03	G	T	G	Initial Difficulty	If the network fails to assist in the progress of others it isolates itself and exposes itself to attack
						<i>Transformation sequence If assistance continues long enough a new resolution emerges</i>
43.0	43	C	C	G	Resolution	As any struggle against opposing forces begins to bear fruit, a network should ensure that the resolution of the conflict is based on an amicable union from a position of strength, free from compromise or any concealment of the network's own defects. It should avoid the use of force and concentrate on the redistribution of the advantages it accumulates
43.1	28	A	C	G	Importance	Whilst resistance is still strong, the network should avoid any hasty implementation of its resolution that could result in major setbacks
43.2	49	G	C	G	Revolution	If the network is vigilant it engenders attitudes appropriate to cautious resolution of the conflict
43.3	58	C	A	G	Vitality	If the network is obliged to maintain relationships with those of inferior values to avoid jeopardizing resolution of the conflict, it will have to endure a period of condemnation by those actively combatting such values
43.4	05	C	G	G	Waiting	The network may identify so closely with action to resolve the conflict that its obstinacy raises obstacles and prevents it from benefiting from advice
43.5	34	C	C	T	Power	The efforts of the network against those of inferior values in positions of power must constantly be renewed, especially because of the obligation to maintain a relationship with them
43.6	01	C	C	C	Creativity	When the objective appears to have been achieved, the network should act resolutely to eliminate any remaining vestiges of the old order, especially those rooted in its own attitudes
						<i>Transformation sequence Resolution and the associated action lead to new encounters</i>
44.0	44	A	C	C	Encounter	A network may find itself attracted by initiatives made by those of inferior values. Although apparently harmless, according them recognition allows them to develop, possibly leading to a dangerous condition, unless they are free from ulterior motives
44.1	01	C	C	C	Creativity	If a measure of acceptance has been accorded to those of inferior values by the network, they must be constantly held in check to prevent undesirable developments
44.2	33	T	C	C	Withdrawl	If those of inferior values have been successfully contained by the network, care must be taken not to allow them to develop their influence through contact with others unable to maintain such control
44.3	06	A	A	C	Conflict	If the network is tempted to collaborate with those of inferior values, but is prevented by circumstances from doing so, the errors that are liable to result from such indecision may be avoided by becoming aware of the dangers
44.4	57	A	G	C	Penetrating Clarity	If the network is unable to tolerate those of inferior values, they cannot be called upon for assistance in time of need
44.5	50	A	C	A	Cultural Heritage	The network may tolerate and protect collaborators of inferior values, relying solely on the superior qualities of its influence as a means of successfully controlling them
44.6	28	A	C	G	Importance	A network no longer concerned with mundane affairs may be able to tolerate the reproaches of those of inferior values with whom it refuses to associate

						<i>Transformation sequence A multiplicity of encounters leads to congregation</i>
45.0	45	T	A	G	<i>Congregation</i>	When circumstances promote congregation in society, a network of superior values, to be capable of focusing this process, should ensure that it is itself well integrated. It should also be prepared to counteract uncontrolled consequences
45.1	17	G	A	G	<i>Following</i>	The network can facilitate formation of a group by encouraging individually those that have not yet committed themselves
45.2	47	A	A	G	<i>Adversity</i>	The process of congregation is assisted by a recognition of mutual complementarity with which the network should work, rather than acting on the basis of arbitrary decisions
45.3	31	T	C	G	<i>Influence</i>	If a group has already formed from which the network is isolated, it can best succeed by allying itself with some of those at the centre, despite the initial humiliation
45.4	08	T	T	G	<i>Solidarity</i>	The network is successful when it acts as a focus for a group united for a higher cause
45.5	16	T	A	T	<i>Enthusiasm</i>	In acting as a focus for a group, the network attracts some people only because of the influence it acquires in the process; this necessitates special efforts to gain their confidence
45.6	12	T	A	C	<i>Stagnation</i>	If the desire of some to group together is misunderstood, their expression of regret can usefully enable the network to revise its views and bring about the alliance
						<i>Transformation sequence Congregation creates an environment permitting advancement</i>
46.0	46	A	G	T	<i>Advancement</i>	A network may benefit from circumstances to rise to a position of influence through unrelenting effort in circumventing obstacles to its progress
46.1	11	C	G	T	<i>Peace</i>	In a position of obscurity, the network can derive strength and encouragement for its progress from those in position of power, who also benefit thereby from such a link to their origins
46.2	15	T	G	T	<i>Unpretentiousness</i>	Even though the network is unsubtle in its relationships with others, it may succeed in advancing because of recognition of the strength of its inherent qualities
46.3	07	A	T	T	<i>Controlled Threat</i>	In the absence of obstacles, the network should take advantage of the opportunity to advance, rather than being preoccupied prematurely with how long such advance will be possible
46.4	32	A	C	T	<i>Endurance</i>	In attaining its goal, the network becomes accepted by those in positions of influence and thus achieves enduring significance
46.5	48	A	G	G	<i>Basic Need</i>	The network should progress steadily rather than becoming overconfident and impatient
46.6	18	A	G	A	<i>Remedial Action</i>	The network should take care to avoid committing itself to advancement for its own sake, and thus become unable to retreat when necessary
						<i>Transformation sequence Continual advancement eventually leads to adversity and exhaustion</i>
47.0	47	A	A	G	<i>Adversity</i>	Under adverse circumstances a network should accept restraint, whilst remaining true to its principles in anticipation of future opportunities. Such restraint may be due to oppression or to the exhaustion of its own resources
47.1	58	C	A	G	<i>Vitality</i>	Faced with adversity, the network should overcome its own negative response to the situation which otherwise will undermine its ability to act
47.2	45	T	A	G	<i>Congregation</i>	Even though external circumstances are satisfactory, the network must concentrate on overcoming inner restraints in order to be able to respond to opportunities offered by those in power
47.3	28	A	C	G	<i>Importance</i>	The network should avoid being oppressed by restraints which are engendered solely by its own indecisive mode of action
47.4	29	A	T	G	<i>Persistence</i>	If endowed with resources it wishes to use for the benefit of others, the network may find itself temporarily impeded by its own uncertainty and the distractions of its peers
47.5	40	A	A	T	<i>Liberation</i>	Although intent on initiatives for the general well-being, the network may find itself obstructed by those in power, in which case progress comes slowly provided it does not lose its equanimity
47.6	06	A	A	C	<i>Conflict</i>	The network may be restrained principally by the assumption that any action is fruitless, in which case a change of attitude should enable it to break free
						<i>Transformation sequence Extremes of adversity necessitate a concentration on basic needs</i>
48.0	48	A	G	G	<i>Basic Need</i>	In order to engender appropriate order in society, a network must ensure that this fulfils the basic needs of humanity, rather than those defined by convention. In doing so care is required and excesses should be avoided
48.1	05	C	G	G	<i>Waiting</i>	If the network dissipates its energies on trivia, it loses all significance for others and will be ignored
48.2	39	T	G	G	<i>Obstruction</i>	If the network neglects to make use of its positive qualities and associates with those of inferior values, it will deteriorate and be unable to accomplish anything of significance
48.3	29	A	T	G	<i>Persistence</i>	Under unfortunate circumstances, the network of superior quality may not be known to those in power nor made use of by others
48.4	28	A	C	G	<i>Importance</i>	It may be of greater long-term benefit for the network to reorganize itself, even though it is temporarily unable to act
48.5	46	A	G	T	<i>Advancement</i>	Despite the value of the network as a catalyst for social renewal, it is useless unless this potential is translated into practice
48.6	57	A	G	C	<i>Penetrating Clarity</i>	The network is of greatest value when as a result of the demands made upon it, it becomes a self-renewing source of inspiration and assistance to all in need

						<i>Transformation sequence Persisting inequalities in access to basic needs eventually engender revolution</i>
49.0	49	G	C	G	<i>Revolution</i>	A network having the confidence of others may be obliged to respond to emerging crisis conditions by promoting transformation in order to meet the needs of the underprivileged
49.1	31	T	C	G	<i>Influence</i>	The network should refrain from initiating radical change until it is absolutely necessary
49.2	43	C	C	G	<i>Resolution</i>	When all other initiatives have failed, revolution may be initiated by the network after careful preparation and bearing in mind the condition to be brought about
49.3	17	G	A	G	<i>Following</i>	After the need for social transformation has been repeatedly expressed, action may be undertaken by the network; this should avoid the errors of ruthless haste and hesitant conservatism
49.4	63	G	G	G	<i>Accomplishment</i>	To be successful, the network should ensure that the radical change undertaken is based on the superior values it embodies which people will support as being instinctively just
49.5	55	G	C	T	<i>Prosperity</i>	The authority of the network of superior values will be acknowledged during social transformation if clear principles of organization are formulated in a manner all can understand
49.6	13	G	C	C	<i>Fellowship</i>	Once the social transformation is underway, those of inferior values will adapt in the light of their own interests and the network should not expect more of them than conditions permit
						<i>Transformation sequence The most transformative revolution is that available through the cultural heritage</i>
50.0	50	A	C	A	<i>Cultural Heritage</i>	Society is nourished by its cultural heritage, a vehicle through which human values are consecrated. A network embodying this heritage can succeed by ensuring an appropriate relationship between its existence and its sense of destiny
50.1	14	C	C	A	<i>Wealth</i>	Irrespective of its humble origins, the network may succeed if it is prepared to refine and develop its mode of action
50.2	56	T	C	A	<i>Marginality</i>	The network should undertake significant initiatives, for even though these may expose it to criticism, the later will not prevent success
50.3	64	A	A	A	<i>Transformation Threshold</i>	If its effectiveness is severely handicapped by lack of recognition, associating the network with superior values will ensure success when the opportunities emerge
50.4	18	A	G	A	<i>Remedial Action</i>	If the network is inadequate to the challenge it faces, and associates with those of inferior values, its initiatives will probably fail
50.5	44	A	C	C	<i>Encounter</i>	If the network is in a position of influence, and attracts able assistance through the quality of its action, it should then take care not to modify its style
50.6	32	A	C	C	<i>Endurance</i>	The network is most successful if the power and severity of its counsel is expressed in a form which others find agreeable
						<i>Transformation sequence The protection of the cultural heritage necessitates crisis preparedness</i>
51.0	51	G	A	T	<i>Crisis Preparedness</i>	In order to fulfil a leadership role, a network should be capable of accepting any external shock and recognizing the nature of the response required by it
51.1	16	T	A	T	<i>Enthusiasm</i>	The relief experienced following a shock may place the network at an advantage compared to others who did not experience it
51.2	54	C	A	T	<i>Elective Affinity</i>	If the network is endangered as a result of severe shock, it should withdraw until the crisis is over rather than acting vainly to recover its losses before the appropriate opportunity
51.3	55	G	C	T	<i>Prosperity</i>	The network is liable to be overwhelmed by an external shock unless it can learn from it and respond to the opportunities it presents
51.4	24	G	T	T	<i>Recovery</i>	The response of the network will be dangerously handicapped if the shock offers no opportunity for it to act
51.5	17	G	A	G	<i>Following</i>	In the event of a multiplicity of shocks, the network can best survive by moving with the flow of events
51.6	21	G	A	A	<i>Decisive Action</i>	If the shock is confusing others, so that they are unable to respond effectively, the network can best prepare to respond by withdrawing from the situation, even though this may invite disapproval
						<i>Transformation sequence Crises cannot continue to emerge if inaction is cultivated</i>
52.0	52	T	G	A	<i>Inaction</i>	The effectiveness of action initiated by a network is largely dependent on the equanimity with which it is able to assess what is required. A network should be able to pause before action is required
52.1	22	G	G	A	<i>Style</i>	By pausing before action has been initiated, the network avoids mistakes although it runs the risk of irresoluteness
52.2	18	A	G	A	<i>Remedial Action</i>	By ceasing to act, the network may avoid a disaster into which those it supports are drawn, without however being able to assist them
52.3	23	T	T	A	<i>Deterioration</i>	Enforced inaction will not induce in the network the tranquillity required to envisage appropriate initiatives
52.4	56	T	C	A	<i>Marginality</i>	The ability of the network to restrain its impulsive responses is valuable, even through this does not prevent it from being perturbed by doubts and restlessness
52.5	53	T	G	C	<i>Development</i>	In contrast to occasional well-formulated statements, injudicious pronouncements by the network can have regrettable consequences
52.6	15	T	G	T	<i>Unpretentiousness</i>	The network may achieve a continuing quality of tranquillity from which it can respond appropriately to all demands made upon it

					<i>Transformation sequence Inaction cannot continue indefinitely, thus at some stage development commences</i>
53.0	53	T	G	C	<i>Development</i> In order to engender lasting development, a network should act slowly over an extended period of time, both to establish cooperative relationships and to increase its own influence so that its initiatives carry weight
53.1	37	G	G	C	<i>Community</i> Difficulties and criticism experienced by the network in the early phases of its action may ensure successful development by preventing excessive haste
53.2	57	A	G	C	<i>Penetrating Clarity</i> The initial success of the network provides it with a sense of security and encouragement as a basis for further action and collaboration
53.3	20	T	T	C	<i>Recognition</i> The network will succeed if it avoids provoking conflict and concentrates on developing and protecting its own position
53.4	33	T	C	C	<i>Withdrawal</i> If the process of development places the network in an awkward or dangerous position, it should be adaptable in order to locate a secure position from which to continue its action
53.5	52	T	G	A	<i>Inaction</i> Due to action by those of inferior values, once it is in a position of influence the network may become isolated and be temporarily misjudged by those on whom it is most dependent
53.6	39	T	G	G	<i>Obstruction</i> Once the work of a network of superior values is completed it can become a striking example for those who may follow in its stead
					<i>Transformation sequence Development permits the establishment of elective affinities</i>
54.0	54	C	A	T	<i>Elective Affinity</i> As a complement to its formal relationships, a network may beneficially engage in integrative initiatives, based on spontaneously emergent sympathetic relations with others, provided that these are conducted with reserve and mutual respect
54.1	40	A	A	T	<i>Liberation</i> The network may successfully wield influence through informal relationship with those in power, even though this relationship cannot be formally recognized
54.2	51	G	A	T	<i>Crisis Preparedness</i> The network can benefit by maintaining its loyalty to those in power, even though they no longer acknowledge some pre-existing informal relationships with them
54.3	34	C	C	T	<i>Power</i> Frustrated by the lack of success of its formal initiatives, the network may enter into a constraining informal relationship which is not compatible with its assessment of its own value
54.4	19	C	T	T	<i>Initiative</i> Out of respect for its principles, the network may beneficially delay establishing relationships until the appropriate opportunity occurs
54.5	54	C	A	T	<i>Elective Affinity</i> If the network originated in an influential context, it may enter into a beneficial relationship with others of more humble origins, provided it places itself at their service and does not draw attention to any fortuitous differences
54.6	38	C	A	A	<i>Opposition</i> The network will not benefit from entering into a superficial relationship with others, especially if it is not based on shared respect for superior values
					<i>Transformation sequence The establishment of elective affinities creates an environment favourable to general prosperity</i>
55.0	55	G	C	T	<i>Prosperity</i> Because of the probability of subsequent decline, only a network that acts optimistically without regret can effectively sustain a time of general prosperity. In so doing careful attention should be paid to the enforcement of agreed rules
55.1	62	T	C	T	<i>Conscientiousness</i> To engender prosperity through a relationship with those in power, the network needs to temper the qualities of wisdom with those of energetic action for an adequate period, in order to achieve an acknowledged influence
55.2	34	C	C	T	<i>Power</i> If the network undertakes initiatives, when its relationship with those in power has been distorted by mistrust due to usurpers, action becomes impossible; it is then preferable for it to uphold its principles as an indirect influence that can ultimately have the necessary effect
55.3	51	G	A	T	<i>Crisis Preparedness</i> When in a role as immediate assistant to those in power, the network does not merit censure if usurpers prevent it from acting
55.4	36	G	G	T	<i>Decline</i> The network can expect success when it is able to temper the qualities of energy with those of wisdom in a favourable relationship with those in power
55.5	49	G	C	G	<i>Revolution</i> If in a position of power the network is open to counsel from those of ability, it will accumulate useful proposals resulting in benefit to all
55.6	30	G	C	A	<i>Normative Constraint</i> The network may achieve a position of power and affluence for itself, but only at the cost of alienating all those depending on it
					<i>Transformation sequence When prosperity declines from its own excesses, estrangement and marginality result from the destruction of relationships</i>
56.0	56	T	C	A	<i>Marginality</i> When a network has no established position or relationships in society, it succeeds best by engaging in short-term activities with those of superior values such that it is not drawn into conflict situations
56.1	30	G	C	A	<i>Normative Constraint</i> It is counterproductive for the isolated network to undertake trivial initiatives in order to achieve favour in the eyes of others
56.2	50	A	C	A	<i>Cultural Heritage</i> The isolated network viewed favourably by others eventually finds a foothold in society and attracts permanent support
56.3	35	T	A	A	<i>Progress</i> By acting discourteously and interfering in the affairs of others, the isolated network may well lose any foothold it has in society and alienate its support, thus placing it in a very vulnerable position
56.4	52	T	G	A	<i>Inaction</i> Disguising its aspirations, the isolated network may obtain a provisional position in society by limiting its publicly voiced requirements, but any resources it can the accumulate will have to be constantly protected, leaving it with a permanent sense of insecurity
56.5	33	T	C	C	<i>Withdrawal</i> In order to establish a relationship with those in power and develop contacts with others, the isolated network can best succeed through a demonstration of its qualities, on the basis of which it can then be recommended
56.6	62	T	C	T	<i>Conscientiousness</i> If, having established a position in society, the network acts imprudently, forgetting its marginal status as a newcomer, it may be rejected, losing all it was in the process of building up

					<i>Transformation sequence Marginality cannot be absorbed or controlled by the environment and thus gives rise to penetrating clarity of perception</i>
57.0	57	A	G	C	Penetrating Clarity A network of limited resources may best achieve lasting success by acting gradually and persistently towards a clearly defined goal in association with others in a position of power. Its influence results from penetrating clarity of judgement that disempowers those with ulterior motives
57.1	09	C	G	C	Subtle Restraint The clarity of understanding of the network may promote indecision when resolute action is to be preferred
57.2	03	G	T	G	Initial Difficulty Strenuous effort should be devoted by the network to tracing and eliminating any elusive negative influences by which initiatives are being distorted
57.3	59	A	T	C	Barrier Dissolution Excessive reflection by the network on a possible initiative undermines its credibility
57.4	44	A	C	C	Encounter The network is assured of success if, in a position of responsibility, it combines the qualities of experience, unpretentiousness and energetic action
57.5	18	A	G	A	Remedial Action When reforms can be gradually introduced by the network, this is best done on the basis of careful preliminary study, with corresponding follow-up evaluations of the appropriateness of the action
57.6	48	A	G	G	Basic Need If the network has the ability to trace negative influences to the instigating body, but no longer has the strength to combat it, then such action is best avoided
					<i>Transformation sequence Use of penetrating clarity leads to a sense of vitality</i>
58.0	58	C	A	G	Vitality A network can best ensure the injection of vitality into its undertakings by engaging in stimulating interaction with others so as to provide a multi-faceted optimistic basis for its initiatives
58.1	47	A	A	G	Adversity The network may benefit from a self-sustaining sense of vitality and optimism which is not dependent upon reinforcement by others
58.2	17	G	A	G	Following The network can avoid regrettable consequences by not indulging in the interaction proposed as stimulating by those of inferior values
58.3	43	C	C	G	Resolution The vitality of the network should be engendered by it in light of its own values rather than deriving from participation in external distractions in which it may become dangerously absorbed
58.4	60	C	T	G	Limitation So long as the network has difficulty in choosing between the stimulation of dynamics based on superior and inferior values, it remains subject to inner conflicts
58.5	54	C	A	T	Elective Affinity The network should protect itself from association with disintegrative influences, however stimulating, because of the harmful effects they may gradually engender
58.6	10	C	A	C	Careful Conduct The network may become so involved in the stimulation of external distractions that it no longer retains any effective control over it own actions
					<i>Transformation sequence Vitality in action leads to the dissolution of barriers</i>
59.0	59	A	T	C	Barrier Dissolution A network can best dissolve divisive barriers preventing collaboration by promoting awareness of underlying unity and solidarity in a manner which engages emotions engendered by superior values
59.1	61	C	T	C	Essential Quality The network should act vigorously to counteract divisive misunderstanding before it has fully taken form
59.2	20	T	T	C	Recognition When the network recognizes a tendency on its own part to establish barriers against others, it should make deliberate efforts to remedy the situation through its supporters
59.3	57	A	G	C	Penetrating Clarity Circumstances may be such that the network can act best by dissolving all barriers distinguishing itself from others, in order to marshal resources for an initiative in the interest of all
59.4	06	A	A	C	Conflict When acting in the general interest, the network can only have a lasting effect if it ceases attaching special importance to its immediate relationships and supporters
59.5	04	A	T	A	Inexperience When society is fragmented by many barriers, the network may provide a powerful idea to dispel misunderstandings, as a focus for the emergence of a new order
59.6	29	A	T	G	Persistence Faced with extreme divisiveness, the network may usefully reduce the danger to itself and to its immediate contacts by dispersing in order to re-assemble on another occasion
					<i>Transformation sequence The elimination of barriers cannot continue indefinitely, thus the need for limitation emerges</i>
60.0	60	C	T	G	Limitation In order that its freedom of action may acquire significance, a network should operate under constraints that distinguish its activities from those of others. Limits should however be set upon limitation of this kind to prevent such discrimination from becoming unbearable to the network itself or to others
60.1	29	A	T	G	Persistence Faced with insurmountable limitations, the network should forego action until an appropriate opportunity arises for a forceful initiative
60.2	03	G	T	G	Initial Difficulty When the moment for action arises, the network should not hesitate in seizing the opportunity
60.3	05	C	G	G	Waiting If the network acts only in its self-interests, it may easily fail to recognize the need for the limits and restraints without which it will make regrettable mistakes
60.4	58	C	A	G	Vitality The network avoids waste of its resources, and may achieve success, through working with limitations rather than against them
60.5	19	C	T	T	Initiative If a network in a position of influence first imposes limitations upon its own action, its achievements under these conditions constitute an example to others who will then accept similar restrictions more readily
60.6	61	C	T	C	Essential Quality Although imposition of excessive limitations may prove unbearable to the network and to others, such ruthlessness applied to itself may under certain circumstances be the only means for the network to uphold its principles

						<i>Transformation sequence Through limitation, dependence on essential quality is assured</i>
61.0	61	C	T	C	<i>Essential Quality</i>	A network may succeed by influencing the most intractable, if it is able to identify with their condition, sincerely affirming the importance of essential qualities that it shares with them. These may take the form of fundamental principles
61.1	59	A	T	C	<i>Barrier Dissolution</i>	The power of fundamental principles upheld by the network is progressively undermined to the extent that it loses its self-reliance through dependence on secret agreements with others
61.2	42	G	T	C	<i>Assistance</i>	Through the fundamental principles which it upholds, the network of superior values may exert a far-reaching influence that attracts others without any intent to achieve this end
61.3	09	C	G	C	<i>Subtle Restraint</i>	The vitality of the network may be dependent, for better or for worse, on the vagaries of the fundamental nature of its relationship with others
61.4	10	C	A	C	<i>Careful Conduct</i>	To increase the power of its fundamental principles, the network should concentrate on deepening its understanding of superior values governing action beyond the domain of factionalism
61.5	41	C	T	A	<i>Deficiency</i>	The network in a position of power may succeed in linking others together in a non-superficial manner through the fundamental quality of the multi-faceted influences engendered by its action
61.6	60	C	T	G	<i>Limitation</i>	The network should be aware of relying on accepted formulas to awaken a shared sense of fundamental solidarity, for such standard appeals may fail when they are most needed
						<i>Transformation sequence Limitation and dependence on essential quality enable actions to be undertaken conscientiously</i>
62.0	62	T	C	T	<i>Conscientiousness</i>	Faced with a challenge for which it is not fully competent, a network of superior values can best succeed by acting with extreme prudence and attention to detail, especially in support of those not in a position of influence
62.1	55	G	C	T	<i>Prosperity</i>	The network should employ conventional measures whenever possible, avoiding the depletion of resources and the risk of failure associated with extraordinary measures
62.2	32	A	C	T	<i>Endurance</i>	Under exceptional circumstances the network may best succeed through extreme restraint and conscientious fulfilment of its obligations
62.3	16	T	A	T	<i>Enthusiasm</i>	Exceptional circumstances require that the network pay attention to details through which it may learn of dangers that otherwise it would be unable to avoid
62.4	15	T	G	T	<i>Unpretentiousness</i>	Under certain circumstances the network should refrain from action until a more opportune moment, rather than render itself vulnerable to dangers through persisting in its own initiatives
62.5	31	T	C	G	<i>Influence</i>	In exceptional circumstances the isolated network, able to bring about order in society, should seek assistance from others on the basis of their genuine achievements rather than their claims to fame
62.6	56	T	C	A	<i>Marginality</i>	If the network fails to exercise self-discipline at a time when attention to detail is required, it is unlikely to be successful in its initiative
						<i>Transformation sequence Conscientiousness ensures the accomplishment of initiatives</i>
63.0	63	G	G	G	<i>Accomplishment</i>	Once the transition from the old to the new order has been accomplished with the exception of details, a network should take considerable care to ensure that the harmony with which events evolve during their final phases does not encourage negligence that enables the seeds of an inferior order to take root once again
63.1	39	T	G	G	<i>Obstruction</i>	A successful transition immediately encourages widespread pressure for further development, which the network should resist in order to avoid the dangers of enthusiastically overshooting the goal and jeopardizing all that has been achieved
63.2	05	C	G	G	<i>Waiting</i>	Following a successful transition, those acquiring power tend to become arrogant and neglect to offer roles to those wishing to participate, thus encouraging discreditable position-seeking manoeuvres; these the network should avoid in the expectation that appropriate opportunities will emerge in due time
63.3	03	G	T	G	<i>Initial Difficulty</i>	Following successful transition, the network together with others will tend to struggle to expand the new order into neighbouring domains functioning under an old order; any success should not then be undermined by using those of inferior values to control such domains
63.4	49	G	C	G	<i>Revolution</i>	Following successful transition, the scandals that may come to light, and which are readily forgotten by others, should be treated by the network as important indicators of possible future difficulties
63.5	36	G	G	T	<i>Decline</i>	Following successful transition the network should take care to continue the sincere affirmation of superior values, since this tends to evolve under the new order into an elaborate ritual from which significance easily disappears
63.6	37	G	G	C	<i>Community</i>	Fascination for the old order, from which a successful transition has been made, may prevent the network from appropriately consolidating what has been achieved
						<i>Transformation sequence Accomplishment cannot exhaust the potential for further transformation</i>
64.0	64	A	A	A	<i>Transformation Threshold</i>	When all has been prepared for transition to a new order that can transform a fragmented condition of society, a network should act with deliberation and caution to determine how the available resources can best be applied to achieve the desired effect
64.1	38	C	A	A	<i>Opposition</i>	As a response to the prevailing lack of order, the network may act prematurely in order to achieve something tangible, thus increasing the risk of failure
64.2	35	T	A	A	<i>Progress</i>	The network should develop its own resources so that they are adequate to the task, but should refrain from using them until the time is ripe
64.3	50	A	C	A	<i>Cultural Heritage</i>	At the moment for transition, the network may lack the resources to complete the task as required, in which case qualified assistance should be obtained
64.4	04	A	T	A	<i>Inexperience</i>	During the struggle to bring about the transition and overthrow the old order, the network should avoid doubt and lay the foundation for the future
64.5	06	A	A	C	<i>Conflict</i>	Justifying its efforts, the network may succeed in its struggle so that superior values become explicit in the envisaged order and the influence it has on society, especially in contrast to that which preceded it
64.6	40	A	A	T	<i>Liberation</i>	On the threshold of the new era convivial celebration is appropriate, but the network should take care not to lose its self-control and thus jeopardize what could be achieved

						<i>Transformation sequence Further transformation calls for creativity</i>
01.0	01	C	C	C	<i>Creativity</i>	Creative energy and inspiration may engender new patterns as a result of unrestrained action by a network
01.1	44	A	C	C	<i>Encounter</i>	Patient caution by the network may be required to avoid premature action
01.2	13	G	C	C	<i>Fellowship</i>	Exertion of a recognized positive influence by the network may be required prior to action
01.3	10	C	A	C	<i>Careful Conduct</i>	Attraction of mass support by the network can lead to the temptations of over-ambition
01.4	09	C	G	C	<i>Subtle Restraint</i>	The network may be faced with the choice between internal development and external social action
01.5	14	C	C	A	<i>Wealth</i>	Widespread recognition of the effects of the action of the network on society may result in long-term positive consequences
01.6	43	C	C	G	<i>Resolution</i>	Catastrophe may result when the network indulges in aspirations exceeding its capacity
						<i>Transformation sequence In order to bear fruit, creativity eventually requires the existence of a receptive environment</i>
02.0	02	T	T	T	<i>Receptivity</i>	A network may respond to the actions and opportunities of its environment through which it may then bring about change
02.1	24	G	T	T	<i>Recovery</i>	The network may take heed of the first signs of deterioration in its environment
02.2	07	A	T	T	<i>Controlled Threat</i>	The network may respond naturally to its environment
02.3	15	T	G	T	<i>Unpretentiousness</i>	Care should be taken to avoid premature public attention to the maturing work of the network
02.4	16	T	A	T	<i>Enthusiasm</i>	The strictest reticence is required by the network to avoid both the enmity of antagonists and the dangers of misplaced acclaim
02.5	08	T	T	G	<i>Solidarity</i>	The network may express its qualities indirectly and discreetly as its actions emerge into prominence
02.6	23	T	T	A	<i>Deterioration</i>	The network may make an inappropriate attempt to take the leading role, thus causing a struggle destructive to all concerned
						<i>Transformation sequence Initiatives emerging in a receptive environment first experience difficulties</i>

.....

						<i>Transformation sequence Further transformation calls for creativity</i>
01.0	01	C	C	C	Creativity	Creative energy and inspiration may engender new patterns as a result of unrestrained action by a network
01.1	44	A	C	C	Encounter	Patient caution by the network may be required to avoid premature action
01.2	13	G	C	C	Fellowship	Exertion of a recognized positive influence by the network may be required prior to action
01.3	10	C	A	C	Careful Conduct	Attraction of mass support by the network can lead to the temptations of over-ambition
01.4	09	C	G	C	Subtle Restraint	The network may be faced with the choice between internal development and external social action
01.5	14	C	C	A	Wealth	Widespread recognition of the effects of the action of the network on society may result in long-term positive consequences
01.6	43	C	C	G	Resolution	Catastrophe may result when the network indulges in aspirations exceeding its capacity

						<i>Transformation sequence in order to bear fruit, creativity eventually requires the existence of a receptive environment</i>
02.0	02	T	T	T	Receptivity	A network may respond to the actions and opportunities of its environment through which it may then bring about change
02.1	24	G	T	T	Recovery	The network may take heed of the first signs of deterioration in its environment
02.2	07	A	T	T	Controlled Threat	The network may respond naturally to its environment
02.3	15	T	G	T	Unpretentiousness	Care should be taken to avoid premature public attention to the maturing work of the network
02.4	16	T	A	T	Enthusiasm	The strictest reticence is required by the network to avoid both the enmity of antagonists and the dangers of misplaced acclaim
02.5	08	T	T	G	Solidarity	The network may express its qualities indirectly and discreetly as its actions emerge into prominence
02.6	23	T	T	A	Deterioration	The network may make an inappropriate attempt to take the leading role, thus causing a struggle destructive to all concerned

						<i>Transformation sequence Excessive importance is undermined by persistence</i>
29.0	29	A	T	G	Persistence	A network may succeed through persisting in its course of action, responding appropriately to difficulties as they emerge. In this way the difficulties may subsequently be used as a form of protection
29.1	60	C	T	G	Limitation	The network should avoid adapting permanently to dangers for this may prevent it from functioning appropriately in a normal environment
29.2	08	T	T	G	Solidarity	When faced with danger, the network should assess the situation and act with caution
29.3	48	A	G	G	Basic Need	In certain dangerous circumstances, inaction is preferable to action which may aggravate the situation for the network
29.4	47	A	A	G	Adversity	In times of danger, the network can usefully base its relationships on simplicity of substance rather than on complex forms of protocol
29.5	07	A	T	T	Controlled Threat	Danger will be increased if the network has ambitions beyond its capacities and the opportunities of the moment
29.6	59	A	T	C	Barrier Dissolution	If the network becomes confused in its strategy in a highly dangerous situation, it is unlikely that this can be immediately remedied

						<i>Transformation sequence Persistence is only effective if there are normative constraints</i>
30.0	30	G	C	A	Normative Constraint	By its nature a network is conditioned and unable to act freely. It may best achieve success by recognizing the beneficial limitations on which it can usefully depend. Through such voluntary compliance, a network develops the clarity of perception required for effective action
30.1	56	T	C	A	Marginality	The network should maintain its composure in the midst of the confusion of society, so it may concentrate attention on the initial phases of any new action
30.2	14	C	C	A	Wealth	The network acts with greatest skill when striking a fruitful balance between extreme strategies
30.3	21	G	A	A	Decisive Action	Recognition of the network's transitory nature should induce comprehension of how it is fulfilled by playing its role in historical processes, rather than encouraging despair or efforts to avoid despair
30.4	22	G	G	A	Style	If the network is overactive it may rapidly deplete its internal resources, without achieving any lasting effect
30.5	13	G	C	C	Fellowship	At the peak of its activity the network may derive long-term benefit by recognizing the transitory nature of its preoccupations
30.6	55	G	C	T	Prosperity	In inducing discipline within itself or society, the network should eradicate the promoters of inferior values, whilst tolerating the weakness of those persuaded to follow them

					<i>Transformation sequence The protection of the cultural heritage necessitates crisis preparedness</i>
51.0	51	G	A	T	<i>Crisis Preparedness</i> In order to fulfil a leadership role, a network should be capable of accepting any external shock and recognizing the nature of the response required by it
51.1	16	T	A	T	<i>Enthusiasm</i> The relief experienced following a shock may place the network at an advantage compared to others who did not experience it
51.2	54	C	A	T	<i>Elective Affinity</i> If the network is endangered as a result of severe shock, it should withdraw until the crisis is over rather than acting vainly to recover its losses before the appropriate opportunity
51.3	55	G	C	T	<i>Prosperity</i> The network is liable to be overwhelmed by an external shock unless it can learn from it and respond to the opportunities it presents
51.4	24	G	T	T	<i>Recovery</i> The response of the network will be dangerously handicapped if the shock offers no opportunity for it to act
51.5	17	G	A	G	<i>Following</i> In the event of a multiplicity of shocks, the network can best survive by moving with the flow of events
51.6	21	G	A	A	<i>Decisive Action</i> If the shock is confusing others, so that they are unable to respond effectively, the network can best prepare to respond by withdrawing from the situation, even though this may invite disapproval

					<i>Transformation sequence Crises cannot continue to emerge if inaction is cultivated</i>
52.0	52	T	G	A	<i>Inaction</i> The effectiveness of action initiated by a network is largely dependent on the equanimity with which it is able to assess what is required. A network should be able to pause before action is required
52.1	22	G	G	A	<i>Style</i> By pausing before action has been initiated, the network avoids mistakes although it runs the risk of irresoluteness
52.2	18	A	G	A	<i>Remedial Action</i> By ceasing to act, the network may avoid a disaster into which those it supports are drawn, without however being able to assist them
52.3	23	T	T	A	<i>Deterioration</i> Enforced inaction will not induce in the network the tranquillity required to envisage appropriate initiatives
52.4	56	T	C	A	<i>Marginality</i> The ability of the network to restrain its impulsive responses is valuable, even through this does not prevent it from being perturbed by doubts and restlessness
52.5	53	T	G	C	<i>Development</i> In contrast to occasional well-formulated statements, injudicious pronouncements by the network can have regrettable consequences
52.6	15	T	G	T	<i>Unpretentiousness</i> The network may achieve a continuing quality of tranquillity from which it can respond appropriately to all demands made upon it

					<i>Transformation sequence Marginality cannot be absorbed or controlled by the environment and thus gives rise to penetrating clarity of perception</i>
57.0	57	A	G	C	<i>Penetrating Clarity</i> A network of limited resources may best achieve lasting success by acting gradually and persistently towards a clearly defined goal in association with others in a position of power. Its influence results from penetrating clarity of judgement that disempowers those with ulterior motives
57.1	09	C	G	C	<i>Subtle Restraint</i> The clarity of understanding of the network may promote indecision when resolute action is to be preferred
57.2	03	G	T	G	<i>Initial Difficulty</i> Strenuous effort should be devoted by the network to tracing and eliminating any elusive negative influences by which initiatives are being distorted
57.3	59	A	T	C	<i>Barrier Dissolution</i> Excessive reflection by the network on a possible initiative undermines its credibility
57.4	44	A	C	C	<i>Encounter</i> The network is assured of success if, in a position of responsibility, it combines the qualities of experience, unpretentiousness and energetic action
57.5	18	A	G	A	<i>Remedial Action</i> When reforms can be gradually introduced by the network, this is best done on the basis of careful preliminary study, with corresponding follow-up evaluations of the appropriateness of the action
57.6	48	A	G	G	<i>Basic Need</i> If the network has the ability to trace negative influences to the instigating body, but no longer has the strength to combat it, then such action is best avoided

					<i>Transformation sequence Use of penetrating clarity leads to a sense of vitality</i>
58.0	58	C	A	G	<i>Vitality</i> A network can best ensure the injection of vitality into its undertakings by engaging in stimulating interaction with others so as to provide a multi-faceted optimistic basis for its initiatives
58.1	47	A	A	G	<i>Adversity</i> The network may benefit from a self-sustaining sense of vitality and optimism which is not dependent upon reinforcement by others
58.2	17	G	A	G	<i>Following</i> The network can avoid regrettable consequences by not indulging in the interaction proposed as stimulating by those of inferior values
58.3	43	C	C	G	<i>Resolution</i> The vitality of the network should be engendered by it in light of its own values rather than deriving from participation in external distractions in which it may become dangerously absorbed
58.4	60	C	T	G	<i>Limitation</i> So long as the network has difficulty in choosing between the stimulation of dynamics based on superior and inferior values, it remains subject to inner conflicts
58.5	54	C	A	T	<i>Elective Affinity</i> The network should protect itself from association with disintegrative influences, however stimulating, because of the harmful effects they may gradually engender
58.6	10	C	A	C	<i>Careful Conduct</i> The network may become so involved in the stimulation of external distractions that it no longer retains any effective control over its own actions

						<i>Transformation sequence</i> Conscientiousness ensures the accomplishment of initiatives
63.0	63	G	G	G	<i>Accomplishment</i>	Once the transition from the old to the new order has been accomplished with the exception of details, a network should take considerable care to ensure that the harmony with which events evolve during their final phases does not encourage negligence that enables the seeds of an inferior order to take root once again
63.1	39	T	G	G	<i>Obstruction</i>	A successful transition immediately encourages widespread pressure for further development, which the network should resist in order to avoid the dangers of enthusiastically overshooting the goal and jeopardizing all that has been achieved
63.2	05	C	G	G	<i>Waiting</i>	Following a successful transition, those acquiring power tend to become arrogant and neglect to offer roles to those wishing to participate, thus encouraging discreditable position-seeking manoeuvres; these the network should avoid in the expectation that appropriate opportunities will emerge in due time
63.3	03	G	T	G	<i>Initial Difficulty</i>	Following successful transition, the network together with others will tend to struggle to expand the new order into neighbouring domains functioning under an old order; any success should not then be undermined by using those of inferior values to control such domains
63.4	49	G	C	G	<i>Revolution</i>	Following successful transition, the scandals that may come to light, and which are readily forgotten by others, should be treated by the network as important indicators of possible future difficulties
63.5	36	G	G	T	<i>Decline</i>	Following successful transition the network should take care to continue the sincere affirmation of superior values, since this tends to evolve under the new order into an elaborate ritual from which significance easily disappears
63.6	37	G	G	C	<i>Community</i>	Fascination for the old order, from which a successful transition has been made, may prevent the network from appropriately consolidating what has been achieved

						<i>Transformation sequence</i> Accomplishment cannot exhaust the potential for further transformation
64.0	64	A	A	A	<i>Transformation Threshold</i>	When all has been prepared for transition to a new order that can transform a fragmented condition of society, a network should act with deliberation and caution to determine how the available resources can best be applied to achieve the desired effect
64.1	38	C	A	A	<i>Opposition</i>	As a response to the prevailing lack of order, the network may act prematurely in order to achieve something tangible, thus increasing the risk of failure
64.2	35	T	A	A	<i>Progress</i>	The network should develop its own resources so that they are adequate to the task, but should refrain from using them until the time is ripe
64.3	50	A	C	A	<i>Cultural Heritage</i>	At the moment for transition, the network may lack the resources to complete the task as required, in which case qualified assistance should be obtained
64.4	04	A	T	A	<i>Inexperience</i>	During the struggle to bring about the transition and overthrow the old order, the network should avoid doubt and lay the foundation for the future
64.5	06	A	A	C	<i>Conflict</i>	Justifying its efforts, the network may succeed in its struggle so that superior values become explicit in the envisaged order and the influence it has on society, especially in contrast to that which preceded it
64.6	40	A	A	T	<i>Liberation</i>	On the threshold of the new era convivial celebration is appropriate, but the network should take care not to lose its self-control and thus jeopardize what could be achieved

01.0	01	C	C	C	Creativity	Creative energy and inspiration may engender new patterns as a result of unrestrained action by a network
02.0	02	T	T	T	Receptivity	A network may respond to the actions and opportunities of its environment through which it may then bring about change
29.0	29	A	T	G	Persistence	A network may succeed through persisting in its course of action, responding appropriately to difficulties as they emerge. In this way the difficulties may subsequently be used as a form of protection
30.0	30	G	C	A	Normative Constraint	By its nature a network is conditioned and unable to act freely. It may best achieve success by recognizing the beneficial limitations on which it can usefully depend. Through such voluntary compliance, a network develops the clarity of perception required for effective action
51.0	51	G	A	T	Crisis Preparedness	In order to fulfil a leadership role, a network should be capable of accepting any external shock and recognizing the nature of the response required by it
52.0	52	T	G	A	Inaction	The effectiveness of action initiated by a network is largely dependent on the equanimity with which it is able to assess what is required. A network should be able to pause before action is required
57.0	57	A	G	C	Penetrating Clarity	A network of limited resources may best achieve lasting success by acting gradually and persistently towards a clearly defined goal in association with others in a position of power. Its influence results from penetrating clarity of judgement that disempowers those with ulterior motives
58.0	58	C	A	G	Vitality	A network can best ensure the injection of vitality into its undertakings by engaging in stimulating interaction with others so as to provide a multi-faceted optimistic basis for its initiatives
63.0	63	G	G	G	Accomplishment	Once the transition from the old to the new order has been accomplished with the exception of details, a network should take considerable care to ensure that the harmony with which events evolve during their final phases does not encourage negligence that enables the seeds of an inferior order to take root once again
64.0	64	A	A	A	Transformation Threshold	When all has been prepared for transition to a new order that can transform a fragmented condition of society, a network should act with deliberation and caution to determine how the available resources can best be applied to achieve the desired effect
