

Hi Bob,

Hope you are well 😊

I started delineating the System 5 Terms to the best of my ability. I managed to do what seem to me to be the 20 unique passive perspectives and attempted a rough translation of those into the active perspective (with the exception of those 3 you previously sent me).

Before I continue refining the active perspective and trying to figure out descriptions for the terms, I just wanted to make sure I'm on the right track. If you have a chance I would appreciate if you can take a look and let me know if I have made any critical errors at this initial stage. The first 2 Terms marked T2O and T2S are "interjective" kind of like Term 3 of System 4. I have pasted them below with descriptions.

Warm Regards,
Dan

COMPANY & NERVOUS SYSTEM INTEGRATION

The same symbols can be used to illustrate the integration of a business organization and the integration of the human nervous system. They are both expressions of the creative process, a business organization being an extension of how we ourselves integrate experience. Thus the right brain PD ↔ T polarity focuses on Product Development (PD) within the context of the Treasury (T). The treasury is the resource capacity necessary to make the idea a reality. In a company the treasury mirrors the facilities, resources and creative potential, while in a human it is a treasury of memory, both physical and mental capacities, that determine the person's creative potential. Practical ideas must relate to the resources essential to translate them into form. Left brain technique then Produces the ideas in behavioural form in relation to our social Organization, as in the P ↔ O polarity. In a company the Production effort works in the context of the Organization structure. The third S ↔ M polarity relates Sales to the Market. In a human it balances one's emotional and physical performance to appropriateness in the social and natural environment. The Basal System that parallels the Limbic System concerns the somatic balance of ideation and behavior, which complements the emotive balance. The Basal System is made up of the basal ganglia, most of the thalamus, the cerebellum, and much of the brain stem. Note that the Autonomic and Somatic triads are the Market for cerebral mentation and vice versa. The limbic and basal polarities thus mediate tentative balances between thought, feeling and behavior, to the extent that there is accurate insight into *potential*, *commitment* and *performance*. Learning from experience takes place on this basis, often through trial and error. System 4 Term numbers are shown in color circles.

Here's a brief description of each hyperedge and how they interact with the vertices (C1) to (C5), based on the structures you've provided:

- **T01: Universal Cognitive Hierarchy**
Structure: ((((()))))
Interaction: Represents a fully nested hierarchy, where each vertex influences the next in a linear sequence, symbolizing a universal cognitive process.
- **T02: Sympathetic Ideation Dynamics**
Structure: (()) () ()
Interaction: Suggests independent connections, reflecting the creation and assessment of ideas within the sympathetic framework of cognition.
- **T03: Emotional Knowledge Exchange**
Structure: (()) (()) ()
Interaction: Indicates two pairs of connected vertices, representing the exchange and transfer of emotional knowledge.
- **T04: Parasympathetic Action Restraint**
Structure: (() ()) () ()
Interaction: Shows a nested pair followed by two independent vertices, symbolizing the parasympathetic system's role in restraining potential actions.
- **T05: Goal-Oriented Interaction Flow**
Structure: (() ()) (())
Interaction: Depicts a nested pair and another pair, highlighting the interactive flow of goal-oriented processes.
- **T06: Somatic Response Initiation**
Structure: ((())) () ()
Interaction: Features a triple nested structure with one independent vertex, indicating the initiation of physical responses.
- **T07: Discretionary Process Integration**
Structure: ((())) (())
Interaction: Has a triple nested structure and a pair, denoting the integration of discretionary processes.
- **T08: Corporeal Autonomy Framework**
Structure: (() () ()) ()
Interaction: Suggests a nested pair, an independent vertex, and another pair, representing the framework of corporeal autonomy.
- **T09: Memory Quantization Network**
Structure: ((() ())) ()
Interaction: Features a triple nested pair followed by an independent vertex, symbolizing the network of quantized memory.
- **T10: Emotional Equilibrium Mechanism**
Structure: ((()) ()) ()
Interaction: Indicates a nested pair within another pair, followed by an independent vertex, reflecting the mechanism of emotional equilibrium.
- **T11: Universal Discretion Matrix**
Structure: (((()))) ()
Interaction: Shows a quadruple nested structure with one independent vertex, representing the matrix of universal discretion.

- **T12: Social Perception Marketplace**
Structure: (() () ())
Interaction: Represents three independent vertices and a pair, symbolizing the social marketplace of perception.
- **T13: Intuitive Vision Synthesis**
Structure: ((()) () ())
Interaction: Has a nested pair, an independent vertex, and another pair, denoting the synthesis of intuitive vision.
- **T14: Right Hemisphere Insight Connectivity**
Structure: ((()) (()))
Interaction: Suggests two pairs of connected vertices, representing the connectivity of insights associated with the right hemisphere.
- **T15: Social Technique Organization**
Structure: ((() ()) ())
Interaction: Features a nested pair followed by another pair, highlighting the organization of social techniques.
- **T16: Language-Driven Behavioral Formulation**
Structure: (((()))) ())
Interaction: Represents a quadruple nested structure followed by an independent vertex, indicating the formulation of behavior driven by language.
- **T17: Left Hemisphere Technique Application**
Structure: ((() () ()))
Interaction: Indicates a nested pair, two independent vertices, and another pair, symbolizing the application of techniques associated with the left hemisphere.
- **T18: Integrated Memory Resource System**
Structure: (((() ())))
Interaction: Shows a quadruple nested structure, suggesting the system of integrated memory resources.
- **T19: Balanced Response Coordination**
Structure: (((()) ()))
Interaction: Features a triple nested pair, indicating the coordination of balanced responses.
- **T20: Proprioceptive Sensory Field**
Structure: () () () () ()
Interaction: Represents five independent vertices, reflecting the proprioceptive field of sensory perception.

Each hyperedge's interaction with the vertices provides insight into different cognitive and behavioral processes, from hierarchical organization to the integration of sensory input and the balancing of emotional responses. The hypergraph model encapsulates a wide range of human experiences, illustrating the complex network of influences that shape our thoughts, feelings, and actions.

Based on the images, descriptions, and additional information you've provided, here are the updated and refined names and descriptions for the hyperedges:

1. **T01 - Universal Cognitive Hierarchy:**
Description: Represents the foundational cognitive structure from the core "Host Idea" to the outward "Behavioral Form," reflecting a universal sequence of cognitive influence.
2. **T02 - Sympathetic Ideation Dynamics:**
Description: Illustrates the dynamic formation and evolution of ideas influenced by emotional and physiological states, leading to tangible actions or behaviors.
3. **T03 - Emotional Knowledge Exchange:**
Description: Symbolizes the transfer and exchange of emotional knowledge, highlighting the interconnectedness of emotional experiences.
4. **T04 - Parasympathetic Action Restraint:**
Description: Depicts the moderation and control of actions by the parasympathetic nervous system, emphasizing the balance between activity and relaxation.
5. **T05 - Goal-Oriented Interaction Flow:**
Description: Represents the interactive flow of goal-oriented processes, where objectives are pursued through coordinated cognitive and behavioral efforts.
6. **T06 - Somatic Response Initiation:**
Description: Captures the initiation of physical responses, illustrating the connection between internal states and external actions.
7. **T07 - Discretionary Process Integration:**
Description: Reflects the integration of discretionary processes, where decision-making is informed by a hierarchy of cognitive and emotional factors.
8. **T08 - Corporeal Autonomy Framework:**
Description: Highlights the framework of corporeal autonomy, where the body's independent functions are orchestrated into coherent actions.
9. **T09 - Memory Quantization Network:**
Description: Emphasizes the network of quantized memory, where experiences are stored and retrieved in a structured manner.
10. **T10 - Emotional Equilibrium Mechanism:**
Description: Focuses on the mechanism of emotional equilibrium, balancing various emotional states to maintain psychological stability.
11. **T11 - Universal Discretion Matrix:**
Description: Encompasses the matrix of universal discretion, representing the cognitive structure that underlies individual decision-making.
12. **T12 - Social Perception Marketplace:**
Description: Envisions the social environment as a marketplace of perception, where individual cognition and emotions interact with societal influences.
13. **T13 - Intuitive Vision Synthesis:**
Description: Combines intuitive insights with conscious ideas, synthesizing a holistic understanding of complex concepts.

14. **T14 - Right Hemisphere Insight Connectivity:**
Description: Connects the holistic and creative thought processes associated with the right hemisphere, integrating insights into a coherent framework.
15. **T15 - Social Technique Organization:**
Description: Organizes social interactions and techniques, structuring the way individuals engage with their social environment.
16. **T16 - Language-Driven Behavioral Formulation:**
Description: Illustrates how language influences behavior, shaping actions through linguistic structures and expressions.
17. **T17 - Left Hemisphere Technique Application:**
Description: Applies logical and analytical processes associated with the left hemisphere to practical and technical tasks.
18. **T18 - Integrated Memory Resource System:**
Description: Integrates memory resources, consolidating knowledge and experiences for efficient retrieval and application.
19. **T19 - Balanced Response Coordination:**
Description: Coordinates balanced responses, ensuring that actions are proportionate and appropriate to the stimuli or situations encountered.
20. **T20 - Proprioceptive Sensory Field:**
Description: Maps the proprioceptive field of sensory perception, allowing for the awareness of body position and movement necessary for coordinated action.

These refined names and descriptions aim to capture the essence of each hyperedge's role within the hypergraph, reflecting the complex interplay of cognitive, emotional, and behavioral factors that define human experience and action. The hypergraph model serves as a theoretical framework for understanding the multifaceted nature of these interactions.

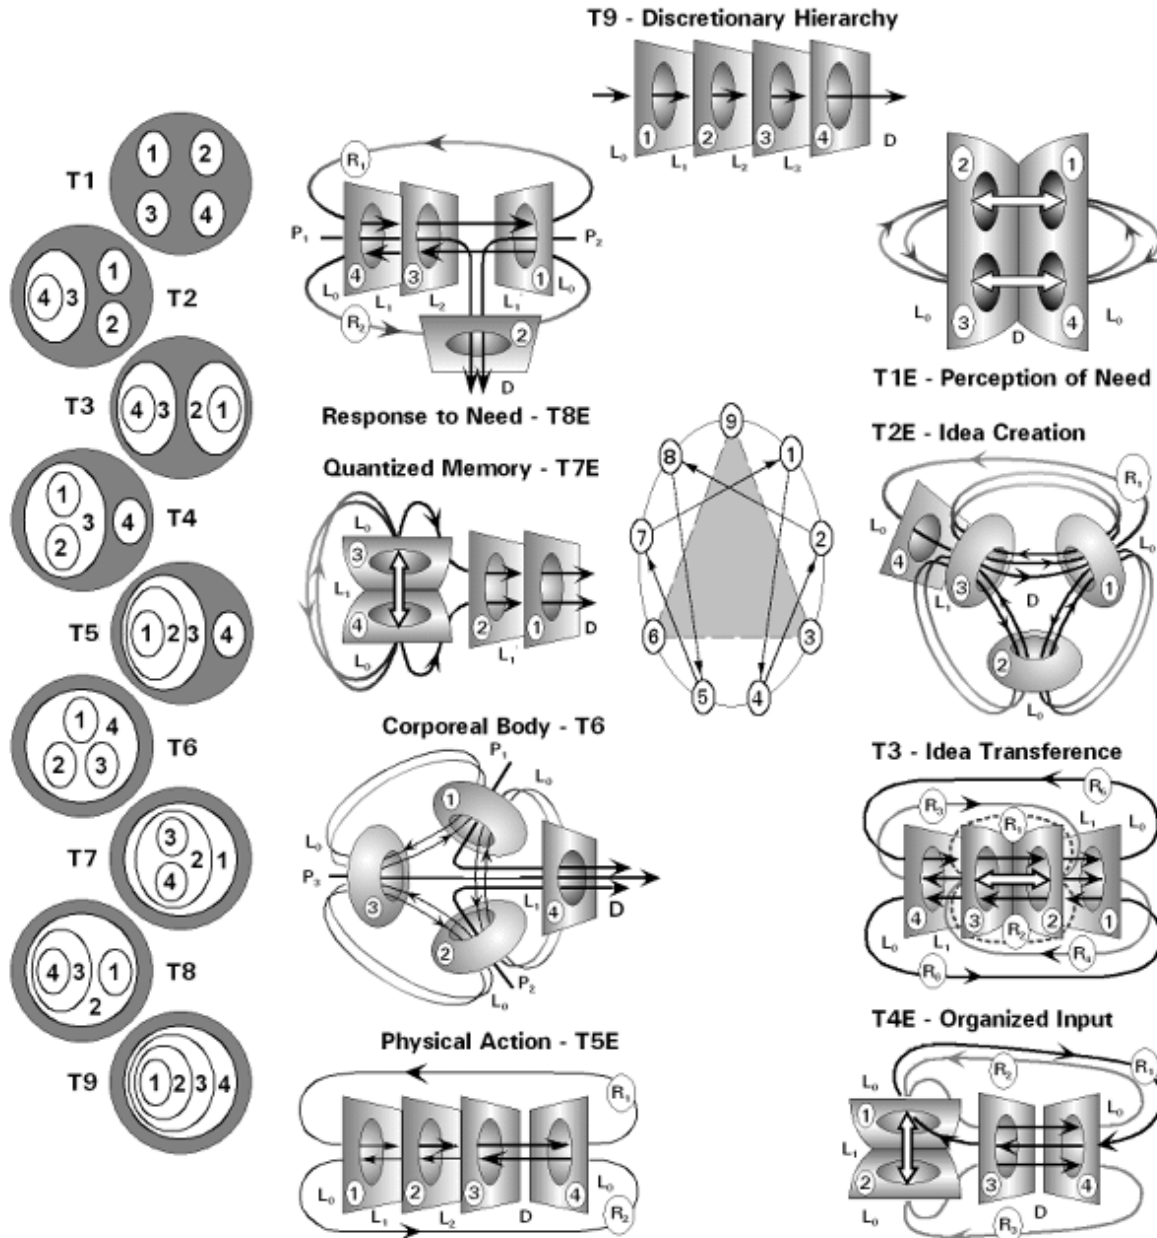

Consider the following transformation matrix with 6 cycles of 5 steps, 3 universal sets and 6 particular sets:

Hi Bob

On a quick note, I noticed the diagram in Fisherman's Guide . In line with my view of the necessary global shift from long-chain economic flows to coherent networks of economic information systems embedded in cultural agency

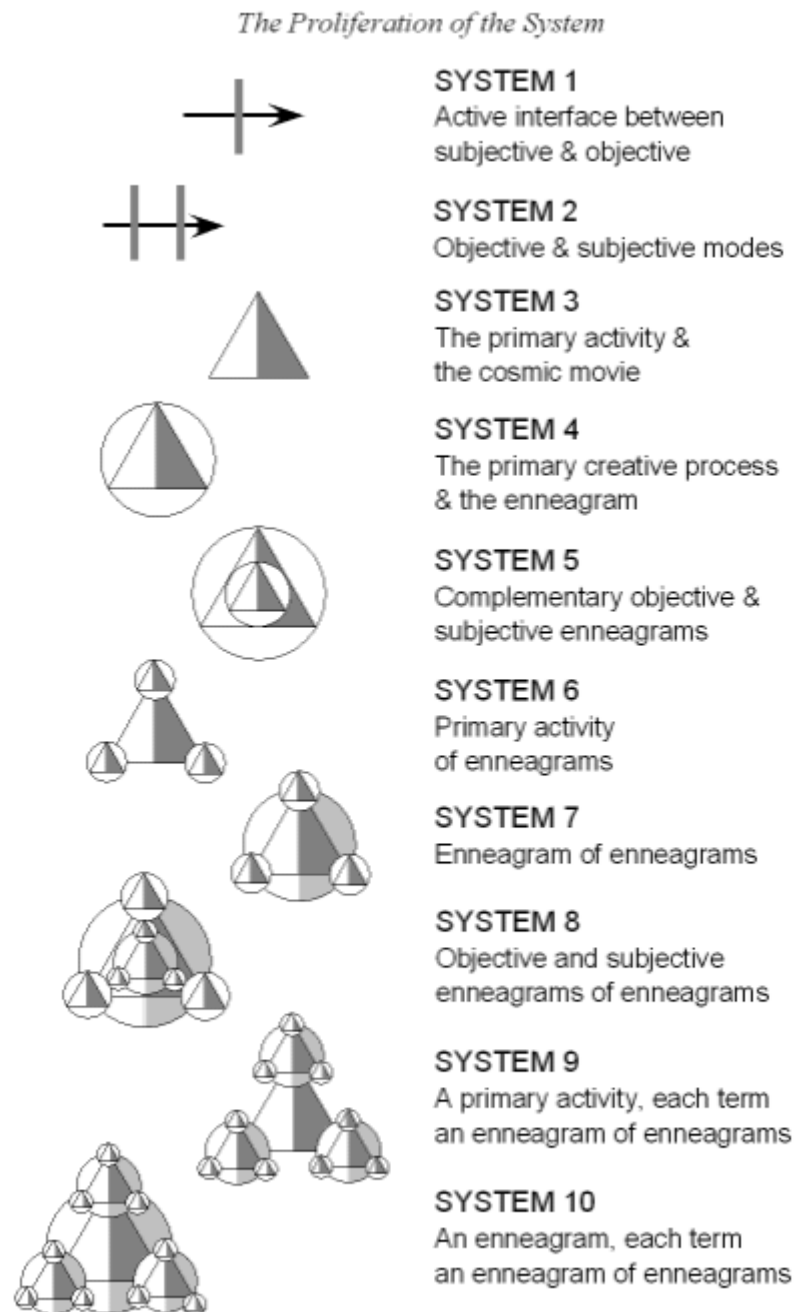

Figure 43

Dan

Hi Dan,

Thank you very much for your very erudite and interesting email. You have obviously done a great deal of creative work related to the human dilemma. I will save and reread this more carefully when I return.

I am attaching the other book I mentioned as my background is a bit unusual and may be relevant to how this whole thing came to me. It should emphasize to you that all of my work comes from cosmic insights that came over a period of about two decades until I thoroughly understood how it all works. I can take personal credit for not one idea. Nothing of how it works comes from my personal thoughts. It was a huge chore to find words of any kind and the delineation of the System took years, even when it had been visually and experientially demonstrated. The book explains how the experiences relate to the System. Time and again I got off track despite myself due to culturally indoctrinated concepts that you mention that I had to see through. The System itself is not dependent on language and not one word was used to communicate it, but it did relate to the visual and experiential phenomena that were explicitly orchestrated by the Supreme Being. I could see active interfaces generating the intense phenomena. So I agree that the cosmic order cannot be understood as an independent thing in itself, that it must relate to sensory experience in some direct way and to communicate it this must be in areas that we are familiar with. That is why it is a **strict discipline of structure**. The direct correspondence is exceedingly precise, completely exact, as demonstrated in the two advanced articles on Spinal Integration and Cerebellar Integration. I hope that the book will help you fully appreciate that none of System is a creation of mine. No one created it. It has always been and is subsumed by the Supreme Being as a nested elaboration of Universal Truth.

The attachment is at the bottom.

Thank you again and best wishes,
Bob

Hi Dan,

Thanks again for your comments. I have found time to convert three Terms of System 5 to PDF. They are attached. The T-9 Term transcends space and time but can be seen face to face in spiritual experience described as the Suffering Face of Humanity at the end of the five days of organic union described in the last book on God Reveals the Cosmic Order. The Term T1-1 is Somatic and is probably related to ascending projections of the reticular system to the neocortex synchronous with visual and perhaps auditory inputs that project directly to the neocortex unlike the other senses that project to the brain stem. T1-2 is sympathetic and probably associated with parallel ascending projections from the reticular system to the limbic cortex. This has to be confirmed by the synaptic structure of the somatic and sympathetic nervous systems consistent with the structural interaction of the other 17 Terms including their expressive and regenerative modes. This should help to give you some idea of the complexity of the problem and the breadth of intuitive grasp required to get hold of it all at once. Left brain language is little help in this regard. Three of the 20 Terms of System 5 have virtual images. Term T1-2 below is one of them. Just a little more to reflect on.

I am away to the UK this evening.

Best wishes,
Bob

Hi Dan,

Thank you very much for your very erudite and interesting email. You have obviously done a great deal of creative work related to the human dilemma. I will save and reread this more carefully when I return.

I am attaching the other book I mentioned as my background is a bit unusual and may be relevant to how this whole thing came to me. It should emphasize to you that all of my work comes from cosmic insights that came over a period of about two decades until I thoroughly understood how it all works. I can take personal credit for not one idea. Nothing of how it works comes from my personal thoughts. It was a huge chore to find words of any kind and the delineation of the System took years, even when it had been visually and experientially demonstrated. The book explains how the experiences relate to the System. Time and again I got off track despite myself due to culturally indoctrinated concepts that you mention that I had to see through. The System itself is not dependent on language and not one word was used to communicate it, but it did relate to the visual and experiential phenomena that were explicitly orchestrated by the Supreme Being. I could see active interfaces generating the intense phenomena. So I agree that the cosmic order cannot be understood as an independent thing in itself, that it must relate to sensory experience in some direct way and to communicate it this must be in areas that we are familiar with. That is why it is a **strict discipline of structure**. The direct correspondence is exceedingly precise, completely exact, as demonstrated in the two advanced articles on Spinal Integration and Cerebellar Integration. I hope that the book will help you fully appreciate that none of System is a creation of mine. No one created it. It has always been and is subsumed by the Supreme Being as a nested elaboration of Universal Truth.

The attachment is at the bottom.

Thank you again and best wishes,
Bob

Hi Dan,

I am impressed and frankly befuddled at the numerical gyrations and manipulations that you are able to perform. Quite incredible! For whatever it is worth to you, as the cosmic order was demonstrated to me it relates to all possible ways that a specific number of active interface processes (constituting what I call a System) can mutually relate with respect to a common inside and outside. This number is fixed for each System if the meaning of each interface is not considered. In other words System 2 has two alternating Terms, System 3 has 4 Terms that cohere in alternating pairs as a nested elaboration of System 2, System 4 has 9 Terms, 6 of which are Particular alternating Sets regulated by Primary and Secondary Universal Sets working in concert as a nested elaboration of System 3 and so on. System 5 has 20 possible Terms, System 6 has 48, System 7 has 115, System 8 has 296, and so on. A quantum physicist friend tells me there is a mathematical progression to it but I do not know what it is or how to compute the terms in higher Systems apart from drawing and counting them. You must know it too. It is apparent however that in order for the cosmic order to be a coherent whole, each higher System must be a nested elaboration of the lower Systems, such that each System is discrete and whole in itself. This indicates that System 4 with 9 Terms that define the enneagram has a certain relevance to a repeating pattern in higher Systems. For System 5 to be a nested elaboration of the lower Systems it must consist of two alternating or reciprocating enneagrams self-similar to System 2. Accordingly System 6 would have alternating Sets of enneagrams that integrate Universal and Particulars self-similar to System 3. System 7 would be an enneagram of enneagrams self-similar to System 4. There is a pattern that seems to repeat every third System but the integrated complexity of it soon becomes unfathomable.

Nor is it necessary to fathom the higher Systems because it is the lower Systems that are most fundamental to the integration of sensory experience. Because of the Rift in Universal Wholeness between Universals and Particulars associated with System 2 the cosmic order has no significance as a thing sufficient unto itself. The whole cosmic order as System 1 is another name for God. As Universal Wholeness He transcends and subsumes the whole universe of Particular phenomena as a nested elaboration of All Being. If there was ONLY God as Universal Wholeness there could be no phenomena in experience of any kind. There could be No God. So the Rift between the Universal and Particular aspects of experience is primary to the whole of creation as well as to God as the living manifestation of the cosmic order. All creation derives from the Rift and all creation seeks to mend the Rift between Self and Other than Self. This need to mend the Rift is the basis of Universal Values, of truth, mercy, compassion, love, harmony and justice. Without it there could be no moral issues in experience. This was explicitly demonstrated in the most awesome terms by the juxtaposed hemispheres held in balance by a single filament of living light between their active interfaces. This is crudely represented in the attachment.

So the active interface processes (or Centres as I call them) **must** each have a distinct sensory identity for the cosmic order to have specific meaning. This identity is defined by a Universal Hierarchy in each Higher System. In System 3 it is defined by the Primary Universal Discretion Term which indicates that **Idea directs Routines that direct Form**. The Idea of a portrait directs the Routines of applying paint to the canvas that results in the Form of the portrait until the Form matches the

Idea. In System 4 Knowledge is distinguished from Idea so that **Idea->Knowledge->Routine->Form**. The Idea of building a house requires Knowledge of many details that direct Routines that give Form to the house.

The order of the active interfaces changes the meaning within each Term so that there can be variants to how Systems 3 and higher work. There are no variants structurally possible for Systems 1 and 2. In System 3 which defines the primary Hydrogen Atom and the atomic structure of the universe, if the Universal Set links up the three closed and intimately related Centres of the Particular Set in reverse direction it creates antimatter. In the fusion of hydrogen to create Helium and higher element there is a Regenerative Mode essential that is represented by the Neutron. The neutron is essentially a collapsed primary Hydrogen atom where the Routine interface of the Universal Set inverts. You can study how this works at the article link http://www.cosmic-mindreach.com/Atomic_structure.html. The regenerative mode of System 4 can be studied at the link http://www.cosmic-mindreach.com/System4_Sequence_Steps.html.

I have finalized a book detailing the cosmic experiences that came over a period of a couple of decades to assist communicating the cosmic order. If you are interested please let me know and I will send you a copy. I may publish it as a kindle book and would be very interested in any feedback you may wish to offer. All this is not easy to grasp. Your patient interest is admirable. I will try and understand what you are attempting to do.

Best wishes,
Bob

PS: I am attaching an excerpt from the book that you may find of special interest.

Hi again Dan,

I am not sure if I sent you a copy of my book Enlightened Management so I attaching it again. It is done in dialogue with the reader as the main actor so it reads like a novel. The first few short chapters cover our cultural evolution from the Hunter Clan, to the Swidden Tribe, then the Country Town, and the Nation City to The Civic Analogue (Chapter 7) which begins on page 45. The chapter is only 7 pages long but I think it covers what you want to do. It seems we have been thinking along similar lines at least so far as having a common objective in mind. I think you will find the chapter interesting. The book is set in Thailand.

Best regards,
Bob

Hi Dan,

I forgot to mention a critical aspect of the cosmic order which is why you are having some difficulty grasping the structural dynamics of how it works as a universally recurring pattern in any context. My apologies for this oversight. There are sub-levels in the System 4 Hierarchy within the Form level at the bottom because of the way it elaborates within itself. This is because the hierarchy involves Infrastructure Cycles at the Knowledge level related to the context of the Idea, and Product Cycles at the Routine level, and Task cycles at the Form level. Task cycles in themselves are **behaviorally functional** as distinct from **structural**. There can be any number of functions or tasks involved.

Task cycles are also structurally subsumed within each level of the management hierarchy in any business due to how it elaborates within itself. The CEO employs task cycles to physically function. He gives directives, receives feedback, scratches his nose and so on related to specific needs in order to creatively balance the three polarities of the **Company Idea**. In this sense he subsumes all 4 levels at the Idea level. He may even personally delegate some things to functional assistants at his level, such as a secretary to schedule his appointments or arrange travel. Likewise Vice Presidents in each domain do functional work in large companies such as in major manufacturing corporations. Their main concerns are with maintaining the infrastructure, the property, buildings, technology, equipment, communication methods, training, research and so on associated with the **Knowledge** level of work. So do Senior Supervisors do functional work at the **Routine** level in committing the resources available to them to various Product Cycles.

So at the **Form** level of work in the Production Domain there may be a General Foreman responsible for delegating specific task cycles to lesser working foremen who perform specific groups of tasks with common laborers who have the necessary skill sets. There may be a similar situation in the Sales Domain, the Financial Domain, the Organization Domain, the Engineering or Product Development Domain, and to some extent in the Marketing Domain. The various ways this can work is spelled out in my book *Enlightened Management*. The point is that a General Foreman and all his subordinates in this case are concerned with Functional Task Cycles at the overall Form level of work that Produces the final physical product of the company. It works in a self-similar way in the other domains with respect to their product output, such as an accountant paying bills, or a salesman making an actual sale. Furthermore the General Foreman although working at the functional level will probably be responsible in some more minor respect for subsumed sub-domains. This may include such things as a clerk to help **Organize** and monitor the distribution of work, a clerk to requisition needed tools and consumable materials that concern **Financial** matters and so on. In manufacturing companies the purchasing and warehousing functions should properly fall within the Production Domain although they are probably delegated at the Supervisory level that works in close association with a Production Foreman. Production must have control of the resources needed to be independently responsible.

Perhaps you can see then that some of the distinctions that you are making are behavioral-functional ones at the bottom subsumed levels within the six domains of the overall Structure. This is implicit in the recurring nested structural nature of the cosmic order.

For example IT has no universal structural significance to the cosmic order, whereas structural **Organization** associated with the HR department does. Because IT may be employed by all six domains and because it connects companies to the wider social Organization in which they function, I think it should generally fall as a functional responsibility under the umbrella of the HR department. This is where you have added it to my chart of how the human nervous system relates to business structure.

I think the other two additions to the diagram can be misleading, namely "Interior Individual Zone" within the head brain in the top triad, and the "Exterior Collective Zone" in the bottom triad. This is a simplified diagram (of just part of System 5) and the bottom triad is really two triads because there is a Somatic triad (System 4) that parallels it anchored to a common Parasympathetic Polarity. The somatic triad projects via the thalamus in the Limbic polarity to the cerebral hemispheres in a manner distinct from the autonomic triad concerned with emotional (emotive) patterns of explicit expression and restraint. The polarity arrows relate Inside to Outside in each case but there is a different context in each case. If you draw a line from top to bottom through the center of the whole diagram then the left hand side relates the individual to the external physically sensory environment while the right hand side relates the individual to the integrating spiritually sensory environment.

Keep in mind that the sympathetic division of the autonomic nervous system fuels emotionally patterned energies to explicit somatic behavior. These are felt as archetypal immediate urges to behave in a certain way to the specific external sensory context (Many) and they need to be tailored as deemed behaviorally appropriate by rational language of the left brain that formulates techniques of explicit behavior. (There is intuition involved that is a subsumed elaboration confined to the left hemisphere by the secondary motor and sensory areas.)

At the same time the parasympathetic division is concerned with the long term interests of the individual and the species as a whole (One). It too is archetypally patterned. This was powerfully demonstrated to me by the Suffering Face of Humanity. The human archetype or genotype is intuitively accessible in rare circumstances because the right brain functions in holistic accord with the archetypal spiritual patterns implicit in the parasympathetic division. Most of us sense our common humanity at least to some extent in dealing with one another. This sense of unity is especially apparent in romantic love and sexual union. It is curious that erection is a function of the parasympathetic division while ejaculation is a function of the sympathetic division. A man may find himself sexually aroused by various women that appear to him especially attractive even though he does not know them at all. Hollywood thrives on it. But actual sexual consummation works in accord with left brain social organization. A social context is required that in normal people is civilized.

I think in your top diagram "Social Business Community Manager" that the activities you list are mostly functional. While mapping things in this way can be a helpful aid with heuristic value for behavioral training this is something distinct from direct intuitive insight into the structural dynamics of the cosmic order. Most of the functions listed fall into one of the six domains. For example Platform Management might be an Engineering or Product Development function. Community Management and Staff Development are HR functions that link the company to the Social Organizational context. Brand Management, Advertising & Marketing, and Customer Management are Sales functions if marketing is interpreted as assessing the market with respect to actual sales. Marketing as an overall Company Domain is properly concerned with the long term vision of the company, assessing market trends and opportunities for new products and so on which is partly consistent with Business Planning and Product Management. Each Domain has a subsumed Marketing domain concerned with assessing new techniques, attending trade functions, conferences and so on to keep abreast of long term developments, whether they be in Production, Sales, Finance, Product Development, Organization (HR), or Marketing itself.

From this overall review I think you will begin to see that all of the eleven points listed in the chart that follows consolidate in some way into just the six domains. I don't find it helpful to include outside stakeholders in the Business Structure because there are only three: namely Shareholder, Employee and Customer. Other companies that may be considered stakeholders in a behavioral sense, such as a tire manufacturer for automobile manufacturers, each have their own six domains that link them to their market environment.

I hope this is helpful. I admire your patience.

Thanks for the info on Slack which I later discovered myself so I am embarrassed that I asked you for it.

Best wishes,
Bob

- **System 2** has two mutually related centres. Centre 1 is universal and unique. It is One. Centre 2 is many.
 - There are many Centres 2, just as there are many people, but we share universal characteristics.
 - Humans are both one and many. We share a universal Centre 1 associated with our species.
 - We sense our common humanity. We see a universal aspect of ourselves in others.
 - Human individuals are particular examples of our common humanity, each with diverse traits and talents.
- **Two Modes to System 2** come into play; one that is subjective and one that is objective.
 - We can sense our universal human aspect subjectively within us in our personal experience.
 - We can also sense our universal human aspect objectively in others.
 - Social values derive from the need to reconcile the two modes, in oneself in relation to others.
 - The two modes transcend and subsume events in space and time. They have spiritual characteristics.
- **System 3** is implied by System 2 as it relates to the projection of three-dimensional space and linear time.
 - System 3 is generated by two sets of three centres. One set is universal. One set is particular and many.
 - There are only four ways that three centres can relate to one another with respect to inside and outside.
 - The four ways define four Terms. Two are universal and unique. Two of them are particular and many.
 - They work in pairs that define two modes in the projection of a holographic movie. It is a cosmic movie.

??????????

- System 1 is generated by 1 sets of 1 centres. 1 set is universal. 0 set is particular and many.
- System 2 is generated by 1 sets of 2 centres. 1 set is universal. 1 set is particular and many.
- System 3 is generated by 2 sets of 3 centres. 1 set is universal. 1 set is particular and many.
- System 4 is generated by 5 sets of 4 centres. 2 set is universal. 3 set is particular and many.
- System 5 is generated by 7 sets of 5 centres. 3 set is universal. 4 set is particular and many.
- System 6 is generated by 11 sets of 6 centres. 4 set is universal. 7 set is particular and many.
- There are only 1 ways that 1 centres can relate to one another with respect to inside and outside.
- There are only 2 ways that 2 centres can relate to one another with respect to inside and outside.
- There are only 4 ways that 3 centres can relate to one another with respect to inside and outside.
- There are only 9 ways that 4 centres can relate to one another with respect to inside and outside.
- There are only 20 ways that 5 centres can relate to one another with respect to inside and outside.
- The 1 ways define 1 Terms. 1 are universal and unique. 0 of them are particular and many.
- The 2 ways define 2 Terms. 1 are universal and unique. 1 of them are particular and many.
- The 4 ways define 4 Terms. 2 are universal and unique. 2 of them are particular and many.
- The 9 ways define 9 Terms. 3 are universal and unique. 6 of them are particular and many.
- The 20 ways define 20 Terms. 5 are universal and unique. 15 of them are particular and many.

System 3:

Robert Campbell 2005

The following is an illustration taken from **Fisherman's Guide** and **Science & Cosmic Order** showing how System 3 works. (For simple basic information click on Introduction to The System above.) For example the symmetries of the primary hydrogen atom are all represented. A description of how it works in relation to quantum atoms is given in **Science & Cosmic Order: A New Prospectus**. A very general overview is given in the website article **Quantum Atoms & Cosmology**. A more advanced description of how System 3 generates atomic structure, space and time is given in the website article **Atoms, Space-Time & System 3**. A description of how it works in relation to the human nervous system is given in **Fisherman's Guide to the Cosmic Order**.

For more see the website articles [Atoms, Space-Time & System 3](#) and [Quantum Atoms and Cosmology](#). Those interested who have a good understanding of science are referred to [Science & Cosmic Order: A New Prospectus](#).

Note:

The sole evidence for an expanding universe is the red shift of distant galaxies. Big Bang cosmology is erected on this single piece of observed fact, together with the relativistic assumption that space-time form a hypothetical continuum in four dimensions. But the very nature of Planck's universal quantum of action, and observed quantum events, clearly indicate a basic discontinuity in space and time, just as indicated by System 3. The red shift of distant galaxies may therefore be explained by relative synchronous distortions over the enormous spans of time that their light takes to reach us. A new cosmology thus emerges of galaxies eternally refluxing their stellar populations according to the way the cosmic order works. Otherwise, Big Bang theory remains based on empirical concepts and laws derived from the physical universe that are negated in the instant of creation. Science cannot address this basic contradiction in the theory. And the inconceivable instant of creation from absolutely nothing must forever remain without confirmation in experience. The theory divorces us from our own understanding. It erodes at the foundations of human values. These same objections do not arise with the way the System works as an expression of the cosmic order. And it offers new avenues to understand many perplexing phenomena including the background cosmic radiation, distant quasars, missing mass, the differential rotation of the sun, and other observations.

How the Cosmic Order Proliferates:

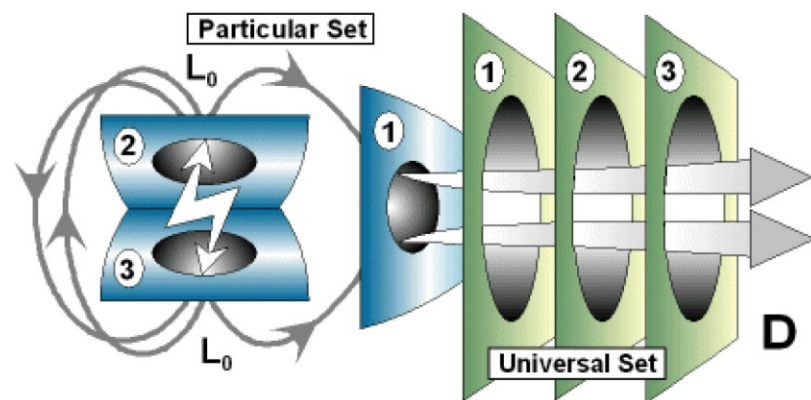

(A very brief summary up to System 3.)

- **System 1** is universal wholeness. There is a oneness to the universe.
 - Science seeks out universal laws to develop technologies that can be explicitly applied.
 - Religions seek universal truths in personal experience that can provide implicit guidance.
 - But undifferentiated oneness does not allow of multiplicity. There is both one and many.
 - Oneness thus implies twoness and multiplicity. Otherwise there can be no phenomena in experience.
 - There is a fundamental Rift in Wholeness. The Creative Process stems from the need to mend the Rift.
- **System 2** has two mutually related centres. Centre 1 is universal and unique. It is One. Centre 2 is many.
 - There are many Centres 2, just as there are many people, but we share universal characteristics.
 - Humans are both one and many. We share a universal Centre 1 associated with our species.
 - We sense our common humanity. We see a universal aspect of ourselves in others.
 - Human individuals are particular examples of our common humanity, each with diverse traits and talents.
- **Two Modes to System 2** come into play; one that is subjective and one that is objective.
 - We can sense our universal human aspect subjectively within us in our personal experience.
 - We can also sense our universal human aspect objectively in others.
 - Social values derive from the need to reconcile the two modes, in oneself in relation to others.
 - The two modes transcend and subsume events in space and time. They have spiritual characteristics.
- **System 3** is implied by System 2 as it relates to the projection of three-dimensional space and linear time.
 - System 3 is generated by two sets of three centres. One set is universal. One set is particular and many.
 - There are only four ways that three centres can relate to one another with respect to inside and outside.
 - The four ways define four Terms. Two are universal and unique. Two of them are particular and many.
 - They work in pairs that define two modes in the projection of a holographic movie. It is a cosmic movie.
- **The primary projection of space** derives from System 3. It is the primary activity.
 - A single space frame is shown at the bottom of Figure 1. It represents a single atom, one of many.
 - The subjective universal set tunnels through the centres of each particle set within, linking them in pairs.
 - A quantum frame (top) shows one of many atoms as a timeless energy bundle inside the universal set.
 - The universal and particular sets in the quantum frame have an inverse relationship to the space frame.
 - All atoms are formless energy bundles in the quantum frame or Void, like the empty screen in the movie.
- **The primary projection of linear time** derives from a series of recurring space frames just as in any movie.
 - The still particle frames alternate with timeless quantum frames in the synchronous movie projection.
 - Since light has a universal relationship to each atom, it integrates the fabric of space in each frame.
 - Relative motions cause the movie to get out of sync accounting for a variety of relativistic effects.
 - Relativistic balances occur in a variety of ways that maintain a preponderance of coherence in the movie.
 - The relative cyclic motions of galaxies is implicated in the regeneration of their stellar populations.
 - In this context Particular Centre 1 is the closed Photon energy shell. C2 is an electron. C3 is a proton.

System 3

System 4

System 4 Terms

Space frames below alternate with quantum frames above. Relative motion is a series of particle jumps between space frames, creating linear time.

Since light can travel only a fixed distance in each space frame, its speed is universal. It defines space by connecting up separate particles of atomic matter.

Reminder Note:

Active interfaces between a common inside and outside are represented by active surfaces consistent with System 1. They are called Centres (C1, C2, etc.) since each has an active centre designated by Light (L) that relates across one or more active interfaces to a common periphery represented by Darkness (D). Everything that we perceive in phenomenal experience involves active interfaces. Everything from atoms and molecules to light itself consists of a form of electromagnetic energy and its derivatives relating to itself across active interfaces. Most active interfaces or Centres are represented by plane surfaces of indefinite extent. This generally indicates archetypal characteristics that are not necessarily bounded in themselves. For example in the human nervous system it may represent the processes of cells but not necessarily all the cells in one human body, only those affected, but it equally applies to all human bodies. Closed Centres are represented by a Triad of ellipses. Only triadic relationships are mutually closed and defined in spatial extent, in the way that System 3 defines one atom here in a Space Frame. An electron is spatially distinct from a proton and from the photon energy shell that defines the whole atom. In a biological context the triad relates to Cells, Organs and Host human being. The three are intimately related and mutually dependent yet each has a closed surface that can be identified in space and time. The Universal Set that links up the three Centres of the Particular Set has open Centres since they apply to all Particular Sets. In the Quantum Frame the Particular Centres are also open since they are integrated as the Universal Idea, Centre 1.

THE FOUR TERMS OF SYSTEM 3:

The diagrams are reproduced from Fisherman's Guide. The descriptions are simplified.

Universal Term 1, *Idea->Routine->Form: Figure 2*

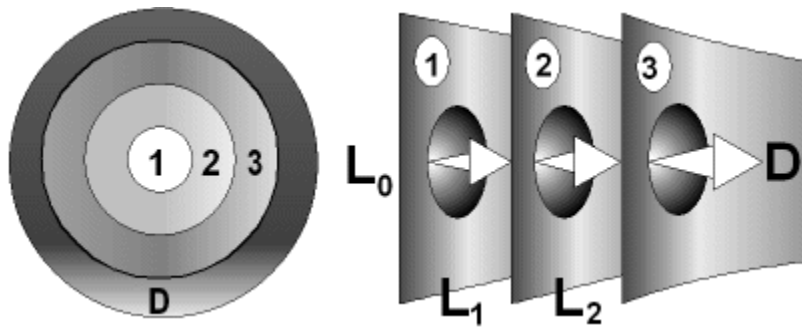

Ideas C1, direct Routines C2, which result in Form C3 consistent with the idea.

This universal Term applies to all creative activity.

It has discretionary characteristics.

As such it can access relevant Particular Ideas represented by Term 3 below, for recall from the Void as illustrated in the Quantum Frame above.

The centres are open and thus relate to all of a kind in context.

Universal Term 2, *Idea->Routine<->Form: Figure 4*

Two Relational Wholes are defined and designated as R1 and R2.

In R1 the Idea C1 relates from inside out through the Routine interface C2 to the Form interface C3 which is perceptually transposed and facing back toward C2.

C1 is subjective to C2.

C3 is objective to C2.

There is feedback via the counter-current Relational Whole R2.

Idea gives Form via a Routine of activity and the Form feeds back via the Routine to find consistency in the Idea.

This universal Term defines a subjective and objective aspect to the creation of all Particular things, from Atoms to TV sets.

The Idea is realized in the Form via the Routine.

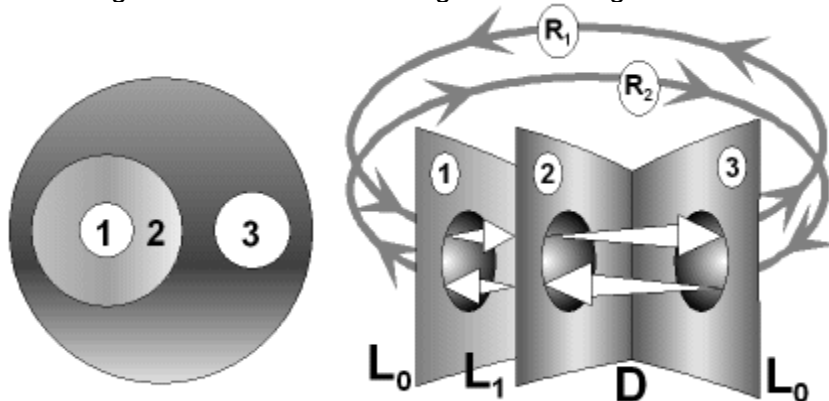

The Universal Set does not itself exist as a thing in Space and Time. It is archetypal.

It is confined within the Particular Sets.

It is illustrated tunnelling through and linking up the Centres of the Particular Term 4 in the Space Frame of the System 3 diagram above.

Each of the three Centres of each Particular Set in Term 4 below are intimately bound as one thing that exists in Space and Time.

We recognize each Particular Thing as something that exists.

Particular Term 3, *Idea=(Routine=Form): Figure 3*

The Routine C2 and Form C3 interfaces close face to face.

They *coalesce* as One.

Each relates inside the other thence outside through the Idea interface C1.

They *are* C1.

The Routine and Form are a coalesced element of technique that *is* the Idea.

The three centres are intimately married as a quantized element of memory in the Void.

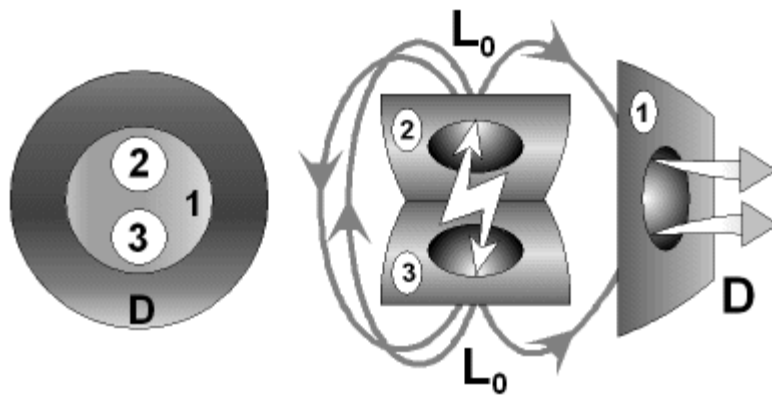

C2 and C3 via C1 simultaneously realize the *internal* and *external* aspects of the creative process.

It is an *eternal* relationship. It is formless and timeless.

All such Particular Sets as quantized elements are holistically integrated in the Void and are synonymous with the Universal Centre 1 in Term 1 above.

The Universal Idea *is* the integrated whole of all the Particular Ideas of the universe.

This is represented in the Quantum Frame of the System 3 diagram.

Particular Term 4, *Idea<=>Routine<=>Form<=>Idea: Figure 5*

The three Particular Centres Idea C1, Routine C2, and Form C3 are mutually separate and thus spatially closed as Particular things that are nevertheless intimately bound together as One Particular Thing.

Each intimately bound Particular Set is spatially separate from other Particular things of the same kind, just as all hydrogen atoms are mutually separate although each consists of an intimately bound photon, electron and proton.

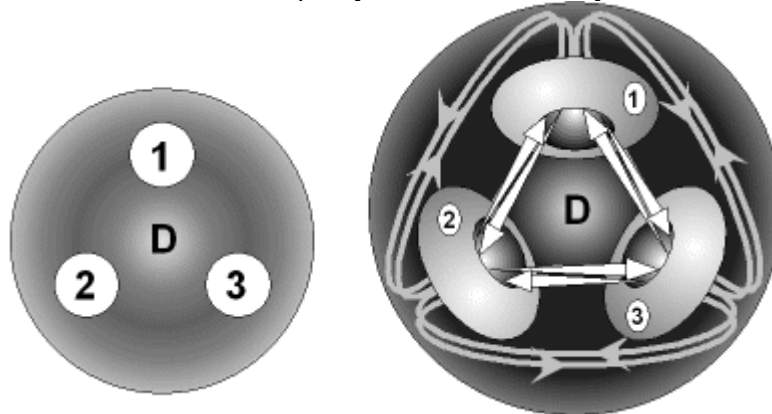

And each human being consists of an intimately bound mind, spirit, and body.

Each of the three Particular Centres are mutually bounded as separate and distinct yet they are mutually related by counter-current identities as in the Universal Term 2 above.

They are mutually identified as having an objective and subjective aspect by their mutual relationship, linked as it is by the Universal Set.

The Universal Term 2 intimately links up each of the Particular Centres in pairs, one pair at a time from Idea to Routine, to Form and back to Idea, in that self-consistent order.

In this way each of the three Particular Centres shares a common Universal Centre and a common Universal Periphery, consistent with System 1.

Idea (Electronic) ->

Knowledge 1 (Somatic infrastructure) ->

Knowledge 2 (Autonomic infrastructure) ->

Routine (Specific Cell interactions) ->

Form (Change in the Molecular Form with respect to both thought and/or behavioral shape of the body with respect to the outside environment)

The Term 9 Universal Hierarchy of System 4 is

conscious ***Idea (1)*** which

directs ***Knowledge (2)*** implicit in the infrastructure of the nervous system which

directs conditioned behavioral ***Routines (3)*** of neuro-muscular activity which

alters the physical ***Form (4)*** of the body in concert with the whole physical universe.

All human actions conform to this universal hierarchy.

In System 3 the hierarchy was ***Idea (1)*** directs ***Routines (2)*** which directs ***Forms (4)***.

In System 4 a ***Knowledge level (2)*** is distinguished distinct from ***Idea (1)***.

In System 5 there is a further distinction of

Emotional Knowledge (3) from ***Conscious Knowledge (2)***.

So the ***Host Idea (1)*** remains as one integrated whole that

directs ***Conscious Knowledge (2)*** that

directs ***Emotional Knowledge (3)*** that

direct ***Routines (4)***, that

directs the ***Form (5)*** of the body in concert with the Universe

This is the primary Universal Hierarchy of System 5 that specifies the relationship of all five interfaces in all 20+ Terms including Expressive and Regenerative Modes. This implicates our **autonomic** nervous systems distinct from our **somatic** nervous system.

Just a note about your drawing of a System 5 Term. It cannot work with 5 double identities that way you have illustrated it. It is just not possible in experience of any kind, because each higher System must be a consistent elaboration of all the Lower Systems that precede it and yet still be a complete System with all 20 Terms involved in a meaningful matrix of transform sequences. As it happens **only** triadic relationships between three centres can have mutually closed interfaces that exhibit surfaces. That is why a primary atom has a photon energy shell, an electron and a proton. It is why we have three distinct functional brains that seek a mutual balance. So when the five interfaces are mutually separate three of them are mutually closed as in System 3 while the other two are open and mutually coalesce as in System 2. But the five interfaces although separate have a hierarchical relationship to one another that is defined by a primary Universal Term where all 5 interfaces are stacked together with interface (1) inside (2) inside (3) inside (4) inside (5).

This hierarchical relationship must relate to the structure of human experience in this case as an elaboration of System 4. The Term 9 Universal Hierarchy of System 4 is conscious **Idea (1)** directs **Knowledge (2)** implicit in the infrastructure of the nervous system which directs conditioned behavioral **Routines (3)** of neuro-muscular activity which alters the physical **Form (4)** of the body in concert with the whole physical universe. All human actions conform to this universal hierarchy. In System 3 the hierarchy was **Idea (1)** directs **Routines (2)** which directs **Forms (4)**. In System 4 a **Knowledge level (2)** is distinguished distinct from **Idea (1)**. In System 5 there is a further distinction of **Emotional Knowledge (3)** from **Conscious Knowledge (2)**. So the **Host Idea (1)** remains as one integrated whole that directs **Conscious Knowledge (2)** that directs **Emotional Knowledge (3)** that direct **Routines (4)**, that directs the **Form (5)** of the body in concert with the Universe. This is the primary Universal Hierarchy of System 5 that specifies the relationship of all five interfaces in all 20+ Terms including Expressive and Regenerative Modes. This implicates our autonomic nervous systems distinct from our somatic nervous system.

So when the five interfaces are separate the only way that they can consistently relate is if (3), (4) and (5) form a mutually closed triad while (1) and (2) coalesce as one such that they relate from within each of the three closed interfaces. Because of the double identity relationships that are only possible in triads this generates three mutually closed virtual images relating emotional or spiritual virtual identity to virtual routines and virtual form. In other words a virtual reality is perceived distinct from the physical reality that we usually believe we are living in. But the fact remains that our sensory perception of the outside world is in fact a virtual reconstruction by our nervous system that mirrors the outside world from the unique perspective of each of us. This is a biological fact.

To sum up System 5 is a major challenge because it must relate to the structure of the human nervous system as well as to our sensory experience of the world around us. This is a very sketchy outline. I will get back to you later on points in your email.

This is a lot to think about so have patience.

Best regards,
Bob
